

KEEP THE PROOF VERSION 2

PRODUCT ARCHITECTURE AND CHANGE MAP

Stage 1 review document. Prepared for Temidayo Afonja, The Density Group. September 18, 2026.

This document is for review and approval only. It does not rewrite, redesign, or generate any final PDF. Stage 2 does not begin until this architecture is explicitly approved.

A note on sources read. This pass is built from: the Version 2 brief (authoritative, overrides research); the current Keep the Proof product files (handbook, 41 pages; Career Evidence Ledger, 12 pages; Start Here, 1 page); Research Pass 2 (September 17, 2026, the principal research evidence); the current live Career Evidence Starter page and its repository source; and the Jessie learning-experience reference at the level of experience principles only. Research Pass 1 was referenced by the brief but was not included in this upload; where Pass 2 restates or controls a Pass 1 conclusion, this document follows Pass 2, and any Pass 1 detail needed later can be supplied.

A note on decision discipline. Research Pass 2 labels its own conclusions KEEP, CHANGE, TEST BEFORE CHANGING, REMOVE candidate, ADD, and DO NOT ADD. This architecture treats anything the research marks TEST BEFORE CHANGING, unresolved, unknown, candidate, or requiring legal review as a hypothesis to design around, never as a settled instruction. Every such item is flagged in place and gathered in Sections 21, 22, and 23.

I. Executive recommendation

Keep the Proof does not need a rebuild. It needs a re-sequencing and two genuine additions, inside the same intellectual property, the same name, and the same price.

The single most consistent finding across the brief and both research passes is a mismatch of location, not of quality. The product's method solves the two problems a person can finish alone: I cannot remember what I did, and I cannot explain what I did. Its marketing and its opening speak mostly to the two problems that need a destination and other people: what of this is relevant elsewhere, and how do I get recognized. Version 2 should stop trying to close that second gap inside the record and instead do the first job so well, and enter it so many ways, that the buyer recognizes themselves on the first page and is doing real work by the third.

Five moves define Version 2:

1. Re-spine the product on CAPTURE, CLARIFY, CARRY, folding the current five-step method into three stages a reader can hold in their head, with CLARIFY as the intellectual center.

2. Open with recognition, not education. A short "why you might be here" page turns the six research situations into a mirror, under one working logic: different circumstances, same first job, which is to build an accurate account of the work.
3. Build a real second door. A substantially stronger RECONSTRUCT path, entered with "Already lost access? Start here," for the person whose systems already closed. This is the largest documented product gap.
4. Add the two things the evidence supports and competitors lack: a narrow corroboration step, who could confirm this and what they observed, and lawful reconstruction channels, both subject to legal review.
5. Change the format, not the content, of the working record. Keep the beautiful guided handbook and offer the fill-in tools as a copyable, personally controlled document rather than only a fillable PDF that is hard to search and maintain over years.

Two things the brief settles that Version 2 will honor without further debate: remove "60-Minute" from the primary descriptor while preserving "Your First 60 Minutes" as an internal first-session experience, and keep destination-specific translation, direction, and stay-or-leave questions out of Keep the Proof, at the seam with the Field Kit.

Everything about cadence, the exact placement and volume of permission content, price, a visibility bridge, and whether the paid center of gravity should tilt toward reconstruction remains a test, not a decision. Those are named in Sections 21 to 23 and must not be silently implemented.

Recommended proposed page count range: 44 to 56 pages for the guided handbook, plus a separate copyable Professional Record. The reasoning is in Section 24.

2. Current product diagnosis: what is already strong and must survive

The current handbook is a genuinely good product. Research Pass 2, run adversarially against more than thirty substitutes, could not find another product that combines what this one does. The following are load-bearing and must survive Version 2 intact.

- The permission standard and the Keep, Care, Never tiers (handbook pages 11 to 14). Unique across every substitute reviewed, aligned with employment counsel and with how insider-risk tools now monitor departing employees. Research labels it KEEP at high confidence and the strongest differentiator found. It errs toward restraint, so it is safe in direction.
- The honesty engine: team result versus your own part (page 22), never invent a number (page 20), and the capture of judgment and prevention (pages 19 to 21). Peer-reviewed evidence on prevention invisibility and on AI fabrication both support this. Labeled KEEP at high confidence.

- The evidence-versus-artifact boundary (page 9) and the filter for what is worth capturing (page 8). This is the discipline that makes the record safe and small. It must not be diluted.
- The non-technical worked examples (Devin, operations; Maya, people and HR; Theo, security; Grace, engineering management; Priya, audit; Sam, clinical research) and the "edge of the tool" boundary page (page 40). Every purpose-built competitor targets technology; these examples are a differentiator, not decoration.
- The Proof Line as the portable end product (page 24), the translation moves (page 23), and the before-and-after demonstration (page 25). Lean, honest, and the clearest teaching in the book.
- The quiet, honest voice throughout, and the operating summary (page 39). The book never overpromises in the body. The tone is right for experienced professionals and must be protected.

What is structurally underpowered today, and why Version 2 exists:

- Reconstruction is about a page and a half (pages 32 to 33) for what the research shows is the job with the strongest evidence of need and of existing spend.
- Corroboration exists only as a single "verifier role" field, when the research shows senior hiring turns on other people almost entirely.
- The opening educates before it recognizes. The buyer meets a definition before they meet themselves.
- The fillable PDF is a poor long-term record format: hard to search, one entry per page, weak on phones, and it duplicates the Ledger.
- The word "proof" quietly promises the tier above what most entries deliver, which are honest examples, not documentary evidence.

3. Proposed Version 2 promise and scope

Name (unchanged, per brief): KEEP THE PROOF

Primary descriptor (per brief): A guided system for building your professional record

Supporting line (per brief): For performance reviews, internal moves, career pivots, re-entry and unexpected change.

Price (unchanged in Stage 1, per brief): \$49

Removed from the primary descriptor (per brief): "60-Minute." Preserved as an internal experience mechanic only: "Your First 60 Minutes," a focused first session, never a promise that a career can be reconstructed in an hour.

The core job, stated for Version 2. Keep the Proof helps an experienced professional build a private, accurate, personally controlled account of their work: what happened, what they contributed, what judgment they exercised, what decisions they made, what changed, what they prevented, what scope they carried, what part of a team result was actually theirs, what they can responsibly retain and say, and who could corroborate it. It is built for work that leaves a weak automatic trail, and it is especially able to represent senior non-technical contribution: judgment, prioritization, risk reduction, prevention, stakeholder alignment, people development, influence, cross-functional coordination, escalation, ambiguity handling, relationship repair, organizational memory, knowing what not to do, and scope absorbed without a title change.

In scope: recall, attribution, accurate capture, generic translation, permission-aware recordkeeping, preparation, and corroboration readiness.

Explicitly out of scope, preserved as honesty (per brief and research): hiring-market conditions, age bias, credential and licensing requirements, promotion committees, sponsorship, talent hoarding, organizational politics, compensation, employer recognition, level preservation, and whether another context values the capability. The product names these plainly and never claims to move them.

The boundary that protects the ladder. Keep the Proof performs generic translation only. It does not decide whether experience is relevant to a specific target role, organization, or industry, and it does not decide what must be relearned. Destination-specific translation, what travels, and what must be relearned live at the seam with the Field Kit, the Career Move Review, and the wider Capability Formation work. Keep the Proof stops at the edge and points, it does not cross.

4. Proposed reader journey, from opening to completion

The journey is designed so the buyer feels recognized before they are educated, and is doing something real within the first few pages.

1. Recognize yourself. A one-page mirror: several plain situations (a review is coming, I was promoted in responsibility only, my access just closed, I have been here fifteen years, I am going back after a break, we were acquired). The reader finds their own sentence. Logic on the page: different circumstances, same first job, build an accurate account of the work.
2. Choose your door. Two entries, named honestly. "Capturing now? Start here." and "Already lost access? Start here." The second routes into RECONSTRUCT without the reader feeling they failed.
3. Understand what you are keeping, briefly. A short Part One: what a professional record is and is not, why it goes missing, the filter, the evidence-versus-artifact line, and the claim, example, evidence, corroboration hierarchy. Shorter than today, because recognition already did the motivating.

4. Do the first session. Your First 60 Minutes: a guided setup that ends with real material captured, one contribution clarified, one Proof Line written, one corroborator named, one private home chosen, and one trigger set for next time. A parallel first session exists for the reconstructor.
 5. Learn the method by using it: CAPTURE, then CLARIFY, then CARRY, each taught through completed examples rather than empty boxes, permission woven through rather than front-loaded (final placement is a test, Section 21).
 6. Build the reusable record. Move the working tools into a copyable Professional Record the reader owns, with the fillable PDF retained as an option.
 7. Keep it current. Event-based capture as the spine, with the existing monthly and quarterly routines preserved as an option, because the cadence question is not settled.
 8. Reach the edge, and stop. The boundary page and the quiet Field Kit pointer. The record's job is done when it is honest, portable, and safe to keep.
-

5. Complete proposed table of contents

Front matter – Cover: Keep the Proof. A guided system for building your professional record. – The record and the fine print (copyright, not legal advice, confidentiality note) – Welcome – Why you might be here (NEW: recognition) – Two ways in: capturing now, or reconstructing after a change (NEW: routing) – How to use this guide, and the one rule that never bends

Part One. Understand the record – The opening question: if your access disappeared this afternoon – Why a professional record goes missing – What a professional record is, and is not – What is worth capturing: the filter – The boundary: your account versus employer-owned artifacts – Claim, example, evidence, corroboration (NEW: the evidence hierarchy) – The spine: Capture, Clarify, Carry

Your First 60 Minutes – The focused first session (capture route) – The focused first session (reconstruct route) (NEW)

Part Two. Capture: what actually happened – The Two-Minute Quick Capture – Event-based capture: the moments worth catching (NEW) – The Full Professional Record Entry – Capturing well: responsibility, judgment, scope, outcome

Part Three. Permission and protection – The central rule: permission comes before protection – Keep, Care, Never – Lines that do not move – Lawful ways to rebuild the record (NEW, LEGAL REVIEW REQUIRED) – Choosing and securing a home you control

Part Four. Clarify: what was actually yours – Separating a team result from your part – Capturing work with no clean metric – Problems prevented and invisible contributions – Scope you carried without the title (NEW framing of existing material) – Who could confirm this: corroboration (NEW)

Part Five. Carry: what you can responsibly take forward – Translate: from internal language to portable language – Build: the Proof Line – See it work: before and after – Where a record becomes usable by other people (TEST: the visibility outputs) – What would not travel: the handoff to the Field Kit (NEW seam, brief-approved boundary)

Part Six. Worked examples – Completed examples across functions and levels (expanded, adds scope-without-title) – One item, all the way through

Part Seven. Reconstruct – Already lost access? Start here – Where the record still lives (sources) – Rebuilding honestly, and the ceiling of reconstruction

Part Eight. Keep it current, and use it – Event-based capture, plus optional routines (TEST: cadence) – Retrieving the right evidence for the moment – The optional, privacy-conscious AI prompt

Part Nine. The record you own – Your Professional Record: the copyable working document (NEW format) – Fillable pages (retained option)

Closing – The operating summary on one page – The edge of the tool: where Keep the Proof ends – About the author

The reusable Professional Record ships as a separate copyable file; the Career Evidence Ledger's duplicated forms are resolved as described in Sections 7 and 13.

6. Page-by-page architecture

For each proposed page or spread: purpose, reader job, existing material reused, revised, new, visual treatment, reader action, and legal-review flag where applicable. Page numbers are indicative and will settle inside the range in Section 24.

Front matter

- Cover. Purpose: name the product and the new promise. Reader job: recognize this is for building a record, not a resume service. Reused: cover system and identity. Revised: descriptor to "A guided system for building your professional record"; remove "60-Minute." New: supporting line. Visual: unchanged cover identity. Action: none. Legal: none.
- The record and the fine print. Purpose: copyright, not-legal-advice, confidentiality note. Reader job: understand the ground rule before starting. Reused: current page 2 nearly verbatim. Revised: light. New: none. Visual: quiet legal register. Action: read. Legal: this page states the not-legal-advice position; confirm wording with counsel.
- Welcome. Purpose: earn trust in the author's voice. Reader job: feel understood. Reused: current page 3, tightened. Visual: editorial opening. Action: read.
- Why you might be here (NEW). Purpose: recognition before education. Reader job: find my own situation. Reused: none directly; draws on the six research situations. New: the recognition

page. Visual: a set of short situation lines, one clearly the reader's, with the shared logic beneath. Action: identify with one line. Legal: none.

- Two ways in (NEW). Purpose: route capture-now and access-already-gone readers. Reader job: pick my door without feeling behind. New: the router. Visual: two labeled entries. Action: choose a path. Legal: none.
- How to use this guide, and the one rule. Purpose: orient and set the non-negotiable rule. Reused: current page 4. Revised: fold in the two-doors idea. Action: read.

Part One. Understand the record

- The opening question. Reused: current page 6 opening. Revised: light. Visual: the "access disappears" scenario. Action: reflect.
- Why a professional record goes missing. Reused: current pages 6 to 7 (systems you do not own, private language, least visible, decays). Revised: retitle from "career evidence" to "professional record" in headings; keep body. Action: read.
- What a professional record is, and is not. Reused: current page 7 table. Revised: soften any implication that every entry is documentary "proof"; align to the evidence hierarchy on the next page. New: one line connecting to claim, example, evidence, corroboration. Visual: the two-column is/is-not table. Action: read.
- What is worth capturing: the filter. Reused: current page 8, near verbatim. Action: apply the test.
- The boundary: your account versus employer-owned artifacts. Reused: current page 9, verbatim. This is load-bearing. Action: internalize the line.
- Claim, example, evidence, corroboration (NEW). Purpose: give the reader an honest hierarchy and set up corroboration. Reader job: see what their record can and cannot be. New: a four-level table (claim near-zero weight; example, high in structured interviews; evidence, often employer-owned; corroboration, decisive at senior levels). Visual: a simple ascending table. Action: locate their typical entry (usually example). Legal: none. Note: this page also does the honest work the name "proof" cannot, and is where Section 25 of the research is answered in the body.
- The spine: Capture, Clarify, Carry. Purpose: replace the five-step method with three stages. Reused: the substance of current page 10 (Capture, Clarify, Translate, Protect, Retrieve). Revised: Translate becomes part of Carry; Protect becomes the permission thread and its own Part; Retrieve becomes part of Carry and the use section. Visual: three large stages with the underlying steps nested. Action: hold the shape. Legal: none.

Your First 60 Minutes

- The focused first session, capture route. Purpose: do real work in the first sitting. Reused: current page 30 setup, reworked away from a completion promise. Revised: rename from "the complete 60-minute setup"; finish line becomes the seven outcomes in Section 12. New: an explicit progress checklist. Visual: a timed, checklist-driven spread with a visible finish line. Action: complete the session. Legal: none.

- The focused first session, reconstruct route (NEW). Purpose: an alternate first session for someone whose access is gone. Reader job: start from cold material without feeling they failed. New: a reconstruction–first session. Visual: parallel checklist. Action: complete the reconstruct session. Legal: sources used must respect the lawful–channels page; flag.

Part Two. Capture

- The Two–Minute Quick Capture. Reused: current page 16, verbatim, with Devin example. Action: write one.
- Event–based capture (NEW). Purpose: memory–retrieval support and a trigger list. Reused: none. New: the eleven event prompts from the brief (project ended, scope changed, praise or feedback received, problem escalated, risk prevented, leadership changed, inherited difficult work, decision under uncertainty, measurable result appeared, team changed, responsibility expanded). Visual: a scannable trigger grid. Action: mark which happened recently. Legal: none.
- The Full Professional Record Entry. Reused: current page 17 (the field set) and page 18 (Maya, completed). Revised: rename "Full Career Evidence Entry" to align with the record language; consider trimming or grouping the twenty fields (see Section 13); the field content stays. Visual: the field table with a completed example beside it. Action: expand one capture.
- Capturing well. Reused: current page 19 (responsibility, judgment, scope, outcome), verbatim. Action: apply to an entry.

Part Three. Permission and protection

- The central rule. Reused: current page 12, verbatim. Load–bearing.
- Keep, Care, Never. Reused: current page 13, verbatim. Load–bearing. Visual: the three–tier block.
- Lines that do not move. Reused: current page 13 lower, verbatim.
- Lawful ways to rebuild the record (NEW, LEGAL REVIEW REQUIRED). Purpose: add the lawful channels the standard currently omits. Reader job: know what they may legitimately use. New: state personnel–record requests where they exist, documents already lawfully held (offer letters, signed reviews, pay records, certificates), written permission and how to secure it, and publicly published work. Visual: a calm, bounded list with a visible legal–review posture. Action: identify lawful sources. Legal: LEGAL REVIEW REQUIRED on every item; do not finalize wording in Stage 2 without counsel.
- Choosing and securing a home you control. Reused: current page 14 setup. Revised: point to the copyable Professional Record as the recommended home. Action: choose a home.

Part Four. Clarify (the intellectual center)

- Separating a team result from your part. Reused: current page 22, verbatim, with Grace example. Load–bearing.
- Capturing work with no clean metric. Reused: current page 20, verbatim.
- Problems prevented and invisible contributions. Reused: current page 21, verbatim, with Theo example. Load–bearing and differentiated.

- Scope you carried without the title (NEW framing). Purpose: name the scope-expanded manager case the research flags as recurring and currently unnamed. Reused: the scope material inside current page 19 and examples. New: an explicit page and at least one worked example (see Section 16). Visual: a before-and-after of an uncredited scope story. Action: capture one uncredited scope example. Legal: none.
- Who could confirm this: corroboration (NEW). Purpose: add the narrow corroboration step. Reader job: name who observed the work and what they saw, while they still remember. New: two prompts, who could confirm this and what they directly observed, plus the boundary that this is corroboration readiness, not networking. Visual: a small paired prompt attached to entries. Action: name one corroborator for one entry. Legal: capturing another person's contact detail and observations touches privacy; keep it to role and observation, and flag for review.

Part Five. Carry

- Translate. Reused: current page 23, verbatim (eight moves plus the protection rule). Keep lean, per the research caution that AI is eroding the value of wording.
- Build: the Proof Line. Reused: current page 24, verbatim, with Maya.
- See it work: before and after. Reused: current page 25, verbatim.
- Where a record becomes usable by other people (TEST). Purpose: the honest three-form bridge (profile and skills keywords, a short forwardable proof line, spoken interview stories). Reader job: know the only three ways a private record reaches other people. Reused: the Proof Line already does part of this. New: naming the three outputs. Visual: three compact output formats. Action: draft one of each. Legal: none. Status: TEST BEFORE CHANGING; include as a lean spread only if approved, because the research leaves the visibility bridge unresolved.
- What would not travel: the handoff to the Field Kit (NEW seam). Purpose: place the relearning question at the boundary, per the brief. Reader job: understand that deciding what travels is a different job. Reused: the edge-of-the-tool logic from page 40. New: a single relearning prompt that hands off rather than answers. Visual: a quiet seam, not a sales page. Action: note the question, do not answer it here. Legal: none.

Part Six. Worked examples

- Completed examples across functions and levels. Reused: current page 27 (Priya, Sam). New: a scope-without-title example and, if space allows, a returner example. Visual: the completed-record card format. Action: read for pattern.
- One item, all the way through. Reused: current page 28 (Theo full sequence), verbatim.

Part Seven. Reconstruct (expanded)

- Already lost access? Start here. Purpose: the second door, made substantial. Reused: current pages 32 to 33 as the seed. Revised and expanded materially. New: framing that a useful account can still be built, starting differently. Visual: a calm, staged path. Action: begin a reconstruction. Legal: none directly, but it leads into sources.

- Where the record still lives (sources). Purpose: list lawful reconstruction sources. New: previous resumes, LinkedIn history, documents already lawfully held, personal calendars where appropriate, old job descriptions, certifications, public announcements, press releases, annual reports, public work and artifacts, and former colleagues who directly observed the work. Visual: a sources checklist. Action: gather sources. Legal: LEGAL REVIEW REQUIRED where any source approaches employer-owned material; cross-reference the lawful-channels page.
- Rebuilding honestly, and the ceiling. Reused: current page 33 lower (reconstruct by period, anchor to moments, mark uncertain as uncertain, then capture in real time). Revised: strengthen the honesty ceiling. Action: rebuild and mark uncertainty.

Part Eight. Keep it current, and use it

- Event-based capture, plus optional routines (TEST). Purpose: present event capture as the spine with the existing monthly and quarterly routines preserved as an option. Reused: current page 31 (Monthly Proof Sweep, Quarterly Proof Review), retained. New: the event trigger as the primary prompt. Visual: a light cadence page. Action: set a trigger and, optionally, two dates. Legal: none. Status: cadence is TEST BEFORE CHANGING; both models coexist, no model is removed.
- Retrieving the right evidence. Reused: current page 32 retrieval table, verbatim.
- The optional, privacy-conscious AI prompt. Reused: current page 34, verbatim, including the confidentiality guardrail. Keep exactly as is; do not expand into an AI feature.

Part Nine. The record you own

- Your Professional Record: the copyable working document (NEW format). Purpose: give the reader a maintainable home. Reader job: hold the record where it is searchable and reusable over years. New: a platform-neutral copyable document (see Section 13). Visual: a clean template the reader duplicates. Action: copy and begin. Legal: none.
- Fillable pages (retained option). Reused: current pages 35 to 38 fillable forms, retained for those who prefer to print or type in a PDF. Revised: resolve the duplication with the Ledger (Section 7). Action: optional.

Closing

- The operating summary on one page. Reused: current page 39, verbatim, updated to Capture, Clarify, Carry language. Action: return to it.
 - The edge of the tool. Reused: current page 40, verbatim. Load-bearing boundary. Action: respect the edge.
 - About the author. Reused: current page 41, verbatim. Action: read.
-

7. Current-to-future content map

Every current handbook page and every Ledger form, with a disposition. Nothing is silently deleted. REMOVE candidate means proposed for removal pending your decision, with the reason stated.

Handbook

Current page	Section	Disposition
1	Cover	REVISE. New descriptor; remove "60-Minute"; add supporting line.
2	Fine print and confidentiality note	KEEP AS IS. Confirm not-legal-advice wording with counsel.
3	Welcome	REVISE (light). Tighten; keep the voice.
4	Orientation and the one rule	REVISE. Fold in the two-doors routing.
5	Part One divider	KEEP / MOVE. Retain as Part One divider.
6	Opening question; why evidence disappears (part)	KEEP AS IS (opening); REVISE headings to "professional record."
7	Least-visible, decays; what evidence is/is not; brag-document line	REVISE. Keep the is/is-not table; soften "proof" overreach; reconsider the brag-document distancing (research REMOVE candidate).
8	The filter	KEEP AS IS.
9	Evidence versus artifact boundary	KEEP AS IS. Load-bearing.
10	The five-step method	REVISE. Recast as Capture, Clarify, Carry; nest the old steps.
11	Part Two divider (permission)	KEEP / MOVE.
12	Central rule; information-risk intro	KEEP AS IS.
13	Keep, Care, Never; lines that do not move	KEEP AS IS. Load-bearing.
14	What the record runs on; setup	REVISE. Point setup to the copyable Professional Record.
15	Part Three divider (tools)	KEEP / MOVE.
16	Two-Minute Quick Capture; Devin	KEEP AS IS.
17	Full entry, twenty fields	REVISE. Rename; consider grouping fields (Section 13); content stays.
18	Full entry, completed (Maya)	KEEP AS IS.
19	Capturing well	KEEP AS IS; source of the new scope-without-title page.
20	No clean metric	KEEP AS IS.
21	Prevention and invisible work; Theo	KEEP AS IS. Differentiated.
22	Team result versus your part; Grace	KEEP AS IS. Load-bearing; becomes the heart of Clarify.
23	Translate, eight moves	KEEP AS IS. Keep lean.
24	The Proof Line; Maya	KEEP AS IS.
25	Before and after	KEEP AS IS.

Current page	Section	Disposition
26	Part Four divider (worked examples)	KEEP / MOVE.
27	Priya, Sam	KEEP AS IS; add scope-without-title, and possibly a returner.
28	Full sequence (Theo)	KEEP AS IS.
29	Part Five divider (routines and use)	KEEP / MOVE. Re-scope to "keep it current, and use it."
30	The 60-minute setup	REVISE. Becomes Your First 60 Minutes; remove the completion promise; add the reconstruct route and a checklist.
31	Monthly and quarterly routines	KEEP / MOVE. Retain as optional; event capture becomes primary. Cadence is a TEST.
32	Retrieval table; starting late (intro)	KEEP AS IS (retrieval); MOVE and EXPAND (reconstruction) into Part Seven.
33	Reconstruction steps	KEEP / MOVE and EXPAND into Part Seven; strengthen the ceiling.
34	Optional AI prompt	KEEP AS IS.
35	Fillable Quick Capture	KEEP / MOVE. Resolve duplication with Ledger; retain as an option beside the copyable record.
36 to 38	Fillable full entry	KEEP / MOVE. Same disposition.
39	Operating summary	REVISE (light). Update to Capture, Clarify, Carry.
40	The edge of the tool	KEEP AS IS. Load-bearing boundary; strengthen the relearning handoff.
41	About the author	KEEP AS IS.

New material needed (not present today): the recognition page; the two-doors router; the claim-example-evidence-corroboration page; the event-based capture page; the scope-without-title page; the corroboration prompt; lawful reconstruction channels (legal review); the expanded Reconstruct part; the copyable Professional Record; and the reconstruct first-session route.

Career Evidence Ledger (12 pages)

Current	Form	Disposition
1 to 2	Cover; how to use	REVISE. Reframe as the copyable Professional Record, or retain as the print companion; decide with the format direction in Section 13.
3 to 4	Quick Capture (2)	MERGE with handbook fillable pages to remove duplication (REMOVE candidate: duplicate fill-in pages).
5 to 7	Full entry (3)	MERGE, same reason.
8	Translation worksheet	KEEP / MOVE into the copyable record.
9	Proof Line builder	KEEP / MOVE.
10	Monthly Proof Sweep	KEEP / MOVE; label is a REMOVE candidate (research: proprietary-label reduction), test before renaming.
11	Quarterly Proof Review	KEEP / MOVE; same label note.
12	Quarterly Evidence Index	KEEP / MOVE; same label note.

The duplication between handbook fillable pages and the Ledger is the clearest REMOVE candidate in the product. The recommendation is one copyable Professional Record as the single working home, with printable and fillable pages retained as an option, so no reader who prefers paper loses anything.

8. CAPTURE architecture

Question the reader is answering: what actually happened?

- Primary tool, unchanged: the Two-Minute Quick Capture (five prompts). It remains the fast, low-friction entry point.
- New: event-based capture. A trigger list (the eleven events from the brief) gives the reader a reason to open the record, matching the research finding that every documented capture trigger is an event, not a date. This is memory-retrieval support: the reader scans the triggers and recognizes what happened, rather than facing a blank page.
- Retained: the Full Professional Record Entry for work worth keeping in depth.
- Coexistence, not replacement. Event-based capture is presented as the spine, and the existing monthly sweep and quarterly review are preserved as an optional rhythm. The research labels cadence TEST BEFORE CHANGING, with two working models both reported as viable (light ongoing capture, or a reconstruction session every six to twelve months). Version 2 shows how event capture and the routines coexist and lets the buyer's own behavior settle the question later.

- Memory support built in. The reconstruct route and the event grid both exist to lower the cost of remembering, which the research names as the core solved problem.

What CAPTURE does not do: it does not judge relevance to a destination, and it does not decide what to keep beyond the permission filter.

9. CLARIFY architecture

Question the reader is answering: what was actually yours?

This is the intellectual center of Version 2, and where the product is most differentiated. Nothing here is invented; it is the existing intellectual property, gathered and strengthened.

- Assignment versus contribution (from current page 19). The gap between what you were assigned and what you drove is where the real contribution lives.
- Team result versus your part (current page 22). Two sentences, always in order: the shared result, then your specific part. Load-bearing.
- Judgment and decisions (current page 19). Capture the call and the options set aside, the part with no artifact.
- Consequences and no invented numbers (current page 20). Describe the before and after; never manufacture a figure.
- Prevention and invisible work (current page 21). The problem that never happened, captured honestly with the risk, the catch, and the likely path, held to "would likely have."
- Scope (current page 19, and a NEW dedicated page). Scope makes size legible; the new page names the scope-expanded-manager case explicitly.
- Honest attribution throughout. The record neither inflates nor disappears.
- NEW, narrow: corroboration. Who could confirm this, and what did they directly observe. This is corroboration readiness, captured while memory is fresh. It is explicitly not networking instruction and not a relationship course. The boundary is stated on the page.

Why CLARIFY carries the weight. The research shows that AI has made wording cheap and that the durable, scarce value is the honest raw account of judgment, prevention, and attribution, which is exactly what CLARIFY produces. Keeping this section strong and the CARRY (translation) section lean is the deliberate posture.

10. CARRY architecture

Question the reader is answering: what can you responsibly take forward?

- Translate (current page 23). Generic translation only: internal language into portable language, the eight moves plus the protection rule. Kept lean on purpose.
- Retain context and scope. Portability without context overstates the work; the translation keeps scope and constraint attached.
- The Proof Line (current page 24). The portable end product, up to five ingredients, never an invented number, never sole credit for shared work.
- Permission and confidentiality boundaries travel with everything (the thread from Part Three).
- TEST: the visibility outputs. The honest three forms in which a private record reaches other people (searchable profile and skills keywords, a short forwardable proof line, spoken interview stories). Included only if approved, because the research leaves the visibility bridge unresolved.
- The relearning handoff (NEW seam, brief-approved). CARRY performs generic translation and then stops. It does not decide whether the experience is relevant to a specific destination, and it does not decide what must be relearned. A single prompt names the question and hands off to the Field Kit and the wider Capability Formation work. This is the hard boundary the brief draws, and it is honored precisely.

What CARRY must never become: destination-specific translation, a decision about what travels, a stay-or-leave or direction reading, or a claim that better wording changes labor-market outcomes.

II. RECONSTRUCT architecture

Entry language (per brief): Already lost access? Start here.

Principle (per brief): if the change has already happened, the reader can still build a useful professional account. They simply start differently.

This is the largest documented product gap and the job with the strongest evidence of need and of existing paid demand. Version 2 turns a page and a half into a real path.

- A dedicated first-session route so the reconstructor never enters through a capture flow that assumes live access.
- Sources (per brief, subject to legal review): previous resumes, LinkedIn history, documents already lawfully held, personal calendars where appropriate, old job descriptions, certifications, public announcements, press releases, annual reports, public work and artifacts, and former colleagues who directly observed the work.
- Method: reconstruct by period, anchor to clearly remembered moments, write quick captures from memory, expand the strongest, then start capturing in real time so reconstruction is never needed again.

- Corroboration is especially valuable here, because institutional memory disappears at exit and colleagues are often the only remaining witnesses to the work.
- The honesty ceiling, strengthened: you will not recover everything, mark uncertain as uncertain, and an honest approximate record beats a confident wrong one.

CRITICAL LEGAL BOUNDARY. The reconstruction sources and any new permission language are not finalized in this architecture. Everything touching lawful channels, documents held, written permission, and public artifacts is flagged LEGAL REVIEW REQUIRED (Sections 15 and 22). Version 2 must not invent legal guidance.

Open strategic question (do not decide in Stage 1): whether the expanded reconstruction lives inside Keep the Proof or becomes a separate paid module. The research and the brief both leave this open. The architecture is built so reconstruction can be a strong part of the handbook and, if later evidence supports it, be lifted into a standalone module without redesign.

12. Your First 60 Minutes experience

A focused first session, never a promise that a career can be rebuilt in an hour.

Design hypothesis for the finish line (from the brief, not immutable copy). By the end of the session the reader has: – 3 pieces of work captured – 1 contribution clarified in depth – 1 judgment, decision, or prevention example identified – 1 portable Proof Line written – 1 possible corroborator identified – 1 personally controlled record location established – 1 clear trigger set for the next capture

Experience principles applied (from the Jessie reference, at the level of experience only, with no imitation of its branding, topic, tone, or aesthetic): visible progress, more doing earlier, shorter instructional chunks, completed examples beside every tool, and one clear next action at each step. The session is a checklist with a visible finish line, not a lecture.

The reconstruct route. For a reader whose access is already gone, the first session runs through RECONSTRUCT instead: gather lawful sources, anchor to remembered moments, produce the first reconstructed captures and one Proof Line, name one corroborator, and set the going-forward trigger. Same finish line, different starting material, no sense of having failed.

Naming note. "Your First 60 Minutes" is an internal experience mechanic. The product does not promise completion in sixty minutes anywhere in the primary descriptor or the marketing.

13. Proposed reusable Professional Record structure

The brief asks for a platform-neutral architecture, with no platform chosen without evidence, and Research Pass 2's format section reaches the same conclusion: the fillable PDF feels substantial but is hard to search, hard to reuse, weak on phones, and duplicated across two files.

Two artifacts, clearly separated:

1. The guided handbook. Teaching, examples, decisions, the boundary, and Your First 60 Minutes. This is the beautiful thing the reader reads.
2. The reusable Professional Record. A copyable, personally controlled working document the reader duplicates and maintains over years.

Platform-neutral means the Record is specified as a structure, not a product. It is delivered as a plain, widely readable document the reader can keep in a personal document tool of their choosing, so it stays searchable, duplicable, and owned. The fillable and printable PDF pages are retained as an option for readers who prefer paper or a typed form. No platform (Notion, a spreadsheet, an app) is named or required.

Proposed structure of the Record (fields drawn from the existing tools, evaluated for long-term use): – A running capture log: one line per event, using the five Quick Capture prompts, easy to add to from a phone. – Full entries: expanded from the existing field set. The current twenty fields are strong but long; propose grouping them into five clusters for maintainability: when and what; formal versus actual ownership; the judgment and the decision; the outcome, the prevention, and the evidence; and translation, corroboration, and retrieval tags. The content is unchanged; the grouping makes a full entry faster to complete and easier to reread. – A corroboration list: per entry, who could confirm this and what they observed (role and observation only, no stored personal detail). – Proof Lines: the portable sentences, kept together for reuse. – An evidence index: a running list so any entry is a search away.

What the Record deliberately omits: any field that invites employer-owned artifacts, any destination-specific targeting, and any direction or stay-or-leave content.

Decision required before Stage 2 (Section 23): whether the reusable Professional Record replaces the standalone Career Evidence Ledger, absorbs it, or ships alongside it as the print companion. The recommendation is that the copyable Record becomes primary and the Ledger's forms are retained as the printable option, removing the duplication.

14. Corroboration treatment

The research is specific: employers confirm only title and dates, institutional memory of contribution disappears at exit, and senior hiring turns on backchannel calls to individuals.

Corroboration lives with people, not institutions. A private record cannot create access, but it can prepare the people who do.

The defensible, narrow role inside Keep the Proof: – Per entry, name who could confirm this, by role, and what they directly observed. – Capture it while memory is fresh, because the witness will not remember forever either. – Keep it to role and observation. Do not store personal contact details or private information about the colleague inside the record. – State the boundary on the page: this is corroboration readiness, not networking, not outreach scripting, not a relationship course.

What it is not, and must not drift into: instruction on how to build a network, ask for referrals, or manage relationships. Those are outside the product. The corroboration step stops at readiness.

Legal note: capturing observations attributed to a named person touches privacy expectations. Keep the field to role plus observation, and include this in the legal review (Section 22).

15. Permission and legal-review map

The permission standard (Keep, Care, Never, the central rule, lines that do not move) is preserved in full. The research names it the strongest differentiator found and marks it KEEP at high confidence. It is not shortened merely to make the product smaller.

What stays as content (no legal question, keep verbatim): the central rule, the three tiers, the lines that do not move, the evidence-versus-artifact boundary, and the AI confidentiality guardrail.

What is new and requires legal review before any wording is finalized (LEGAL REVIEW REQUIRED): – State personnel-record inspection and copy rights, which vary by state and do not exist federally. – Documents the employee already lawfully holds (offer letters, signed reviews, pay records, certificates). – How to secure written permission, given that verbal permission is documented as failing. – Anonymized process accounts, where the current standard may be stricter than common practice and sits in tension with the product's own translation moves. – Work-for-hire and portfolio use; contractor versus employee ownership. – Client confidentiality layered on employer confidentiality for consultants and auditors. – Severance and non-disparagement clauses; preservation exceptions where discrimination or whistleblower claims exist. – Employer AI-tool policies. – The corroboration field's handling of another person's observations (privacy).

What is a sequencing test, not a legal question (Section 21): where the permission content sits and how much of it appears before the reader reaches the first tool. The research notes permission currently occupies a large share of the pages and that its friction effect is unmeasured. Version 2 proposes weaving permission through rather than front-loading all of it, but the exact sequence is a test, not a decision.

The posture: keep the standard, complete it only where counsel confirms, and never expand an unreviewed legal claim.

16. Senior non-technical worked-example plan

The examples are a core differentiator, because every purpose-built competitor targets technology. Version 2 keeps all existing examples and adds coverage of the cases the research surfaced.

Retained (current): Devin (operations, a clean metric), Maya (people and HR, measurable and qualitative), Theo (security, prevention with no metric), Grace (engineering management, team versus individual), Priya (audit, handled by omission), Sam (clinical research, coordination and influence with no formal authority).

Proposed additions, each chosen to cover a senior non-technical pattern the research names and the current set underweights: – Scope expansion without a title change. A manager absorbing director-level scope with no reclassification, turning uncredited scope into a legible record and a case. This is the recurring, currently unnamed case. – Judgment under uncertainty with an ambiguous outcome. A decision made on incomplete information where the result is real but not cleanly attributable, showing how to record judgment honestly without a tidy win. – People development. Developing a person or a team as the contribution, which leaves almost no artifact and is easily lost. – Cross-functional coordination and relationship repair. Unblocking or repairing work across functions through influence, extending the Sam pattern into a management context. – A returner re-entry example, if space allows, showing how pre-break work is assembled and dated honestly.

Coverage matrix the additions complete, per the brief: scope expansion without title, judgment, prevention, risk, people development, cross-functional work, ambiguous outcomes, and no clean metric. Every example follows the existing card format: the work, the judgment, what changed, the portable version, and kept-versus-left-out.

17. Free Starter versus Keep the Proof boundary

The free product stays useful. The research is explicit that a free product finishing something real is normal freemium behavior, not a leak, and that the problem to solve is the size of the paid job, not the generosity of the free one.

Current live Starter (source of truth, from the live page and its repository source): – Free, the 10-Minute Career Evidence Starter, a six-page fillable PDF. – Finishes one real accomplishment: Before, then Your contribution, then What changed, then What travels. – Produces one completed Career Evidence Entry, one portable Proof Line, and one repeatable way of thinking. – Includes a permission checklist. – States it is not resume writing, not a job-search course, does not decide whether to stay or leave, and does not include the reusable Career Evidence Ledger.

The approved distinction (per brief): – Career Evidence Starter: helps the user finish one real accomplishment and produce one usable result. – Keep the Proof: helps the user build the broader professional record they return to across reviews, moves, pivots, re-entry, and unexpected change.

Why Version 2 makes the paid job unmistakably larger. The free product finishes one entry in one sitting. Keep the Proof now finishes something a person cannot finish alone in an evening: a maintained, permitted, corroboration-ready professional record, with a real reconstruction path for a career already behind a closed door. The gap is the record, the reconstruction, the corroboration, and the maintenance, not a crippling of the free tool.

Starter-page copy that will need updating AFTER Version 2 is approved (do not modify the live Starter page during Stage 1): – The line describing paid Keep the Proof as "the paid 60-minute system" (currently on the Starter page) is superseded and should become "A guided system for building your professional record." – The line describing paid Keep the Proof as "the paid Career Evidence System" should be updated to the new descriptor. – The "not included: the reusable Career Evidence Ledger" line should be revisited if the Ledger becomes the copyable Professional Record. These are logged for a later, separate change; the Starter is not touched now.

18. Keep the Proof versus Field Kit and Career Move Review boundary

This boundary is the spine of the Capability Formation ladder and the brief draws it firmly.

- Keep the Proof builds the record and performs generic translation. It answers: what happened, what was mine, what changed, what I can responsibly say, and who could confirm it.
- The Field Kit, the Career Move Review, and the wider Capability Formation work answer the destination questions: what travels to a specific target role, organization, or industry, what must be relearned, and whether to move at all.

The seam, made explicit in Version 2: – Keep the Proof's CARRY section performs generic translation and then hands off with a single relearning prompt that names the question and points to the Field Kit. It does not answer it. – The edge-of-the-tool page (current page 40) is retained and strengthened as the formal boundary. – No career-direction, stay-or-leave, or destination-specific content enters Keep the Proof. The research is unambiguous that blending blurs both products.

Organizational and enterprise capability content stays entirely out of Keep the Proof and belongs to the organizational side of Capability Formation (the Team Read and Organizational Read work). Research marks this DO NOT ADD at high confidence.

19. Visual teaching system

The revised product should feel guided rather than report-like, using artifacts, marked-up examples, transformations, and decisions as the primary visual language, and preserving the established Capability Formation identity: deep navy, warm cream, muted gold, restrained serif with a clean sans, professional, serious, and warm. No decorative imagery, no stock career photography, no generic AI graphics, and no imitation of the Jessie reference.

The recurring visual devices, each teaching one distinction: – TEAM RESULT to YOUR CONTRIBUTION – INTERNAL LANGUAGE to PORTABLE LANGUAGE – CLAIM to EXAMPLE to EVIDENCE to CORROBORATION – WHAT HAPPENED to WHAT YOU DECIDED to WHAT CHANGED – VISIBLE RESULT versus PREVENTED PROBLEM

Experience mechanics, drawn from the Jessie reference at the level of principle only: visible progress through the guide, more doing earlier, shorter teaching chunks, a completed example beside every tool, before-and-after transformations, callout boxes only when they carry weight, generous whitespace, and one obvious next action per page. The book teaches by showing a real record taking shape, not by explaining at length.

What visual richness must never become: decoration for its own sake, a dashboard aesthetic, or a motivational quote-card feel. The artifact of a filled-in record is the hero image.

20. What should NOT change

- The name Keep the Proof and the \$49 price (Stage 1).
 - The permission standard and Keep, Care, Never.
 - The evidence-versus-artifact boundary.
 - Team result versus your part, never invent a number, and the judgment and prevention capture.
 - The non-technical worked examples and the scope-boundary page.
 - The honest, quiet voice and the operating summary.
 - The edge-of-the-tool boundary and the Field Kit seam.
 - The out-of-scope honesty about structural barriers the product cannot move.
 - The free Starter's genuine usefulness.
 - The rule that the product never claims documentation controls employer decisions, and never claims translation overcomes structural constraints.
-

21. Research hypotheses intentionally NOT implemented in Stage 1

These are labeled TEST BEFORE CHANGING or unresolved by the research, and the brief itself defers several. They are designed around, not implemented.

- Whether the paid center of gravity should move from maintenance to reconstruction and targeting. Reconstruction is expanded; the product's primary job is not redefined.
 - Cadence. Time-based, event-based, or hybrid. Event capture is presented as the spine and the existing routines are retained; no routine is removed.
 - Where permission content sits and how much appears before the first tool. Proposed weaving, but the exact sequence is a test.
 - The visibility bridge (profile and skills keywords, forwardable proof line, interview stories). Included only if approved; left at the Field Kit seam otherwise.
 - Price at \$29, \$49, or \$79, alone or with a reconstruction module. Unchanged in Stage 1.
 - Renaming, including dropping "career evidence" entirely or reconsidering the word "proof" in the name. The descriptor is made plain; the name is unchanged and flagged for testing.
 - Whether to distance from or reclaim the term "brag document." Flagged, not decided.
 - Whether reconstruction becomes a separate paid module. Architected to allow it later; not decided now.
 - Any B2B or licensing path to outplacement or returner programs.
-

22. Legal questions requiring external review

No legal guidance is invented in this architecture. The following require external legal review before any Stage 2 wording is written, and each is flagged in place in the relevant page.

1. State personnel-record inspection and copy rights, by state, including timing, and the absence of a federal right.
2. Documents an employee may lawfully retain (offer letters, signed reviews, pay records, certificates) and how to describe them safely.
3. Securing written permission, and the documented failure of verbal permission.
4. The anonymized-process-account standard, which may be stricter than common professional practice and sits in tension with the product's own translation moves.
5. Work-for-hire and portfolio use of employer work; contractor versus employee ownership.
6. Client confidentiality layered on employer confidentiality for consultants and auditors.

7. Severance and non-disparagement clauses, and preservation exceptions where discrimination or whistleblower claims exist.
8. Employer AI-tool and monitoring policies, and how the guide should describe them.
9. The corroboration field's handling of a named person's observations (privacy).
10. The not-legal-advice disclaimer wording itself, confirmed for Version 2.

Until counsel confirms, the reconstruction and lawful-channels pages ship as structure and intent only, with placeholder-level guidance clearly marked for legal completion.

23. Decisions still required from Temidayo before Stage 2

1. Approve the CAPTURE, CLARIFY, CARRY spine and the recognition-first opening.
 2. Approve the two-doors structure and the expanded RECONSTRUCT part, and decide whether reconstruction stays inside the handbook or is architected as a separable module.
 3. Approve adding the narrow corroboration step and the claim-example-evidence-corroboration page.
 4. Approve the copyable Professional Record as the primary working home, and decide its relationship to the Career Evidence Ledger (replace, absorb, or retain as the print companion).
 5. Approve the Your First 60 Minutes finish line, or adjust the seven target outcomes.
 6. Decide whether the visibility outputs (the three forms) are included in Version 2 or held at the Field Kit seam.
 7. Confirm the permission-sequencing intent (weave rather than front-load), pending the later test.
 8. Confirm the set of new worked examples in Section 16.
 9. Commission the legal review in Section 22, since several pages cannot be finalized without it.
 10. Confirm the proposed page-count range in Section 24, or set a different target.
 11. Confirm the descriptor and supporting line wording exactly as the cover will carry them.
-

24. Proposed final page count range

Range, not a fixed count: 44 to 56 pages for the guided handbook, plus a separate copyable Professional Record and a retained set of printable and fillable pages.

Reasoning. The current handbook is 41 pages. Version 2 removes little (the main reductions are resolving the fillable-page duplication and tightening the front matter), and adds a bounded set of new pages: the recognition page, the two-doors router, the evidence-hierarchy page, the event-capture page, the scope-without-title page, the corroboration prompt, the lawful-channels page,

the expanded reconstruction part (roughly three to five pages where there are now two), the reconstruct first-session route, and the visibility spread if approved. The lower bound assumes the visibility outputs are held at the seam and the reconstruction expansion is modest; the upper bound assumes both are included and reconstruction becomes a full mini-part. A tighter number is not appropriate at Stage 1 because two of the largest contributors, the visibility spread and the reconstruction depth, are open decisions.

The copyable Professional Record is counted separately, because it is a working document the reader duplicates, not a section of the book.

25. Production plan for Stage 2

Stage 2 begins only after this architecture is approved. Proposed sequence:

1. Lock decisions. Resolve the eleven items in Section 23 and confirm the page-count range.
2. Legal review. Commission and complete the review in Section 22 before writing any permission or reconstruction wording. This is the critical-path item and should start first, because several pages depend on it.
3. Content pass, reusing existing intellectual property. Draft the new pages (recognition, two-doors, evidence hierarchy, event capture, scope-without-title, corroboration, lawful channels, expanded reconstruction, reconstruct first session), and re-sequence the existing pages into Capture, Clarify, Carry. No existing intellectual property is discarded without a decision.
4. The reusable Professional Record. Specify and build the copyable document structure, and resolve the Ledger relationship.
5. Worked examples. Write the new senior non-technical examples in Section 16 to the existing card format.
6. Visual system. Apply the visual teaching devices in Section 19 within the established Capability Formation identity; build the guided, checklist-driven first session.
7. Draft review. Produce a full Version 2 draft for your review before any final PDF is generated.
8. QA against the quality test (below), the honesty rules, and the boundaries, then legal sign-off on the reviewed pages.
9. Final generation. Only after approval of the draft: generate the final handbook, the copyable Professional Record, and the updated bundle. Update the superseded Starter-page copy (Section 17) as a separate, small change.

Sequencing note. Legal review and the two open strategic decisions (reconstruction placement and the visibility bridge) gate the largest parts of the build, so they are resolved first. Nothing in Stage 2 starts before this architecture is approved.

Appendix: the architecture tested against the quality test

Does the buyer feel recognized before being educated? Yes. The recognition page precedes the definitions.

Does the product help them do something within the first few pages? Yes. Event capture and the first session put the reader into real work early.

Does Capture, Clarify, Carry provide an obvious spine? Yes, three stages replacing five steps.

Can someone who already lost access enter without feeling they failed? Yes. The two-doors router and the reconstruct first session are built for exactly that.

Does the product capture senior work that leaves no obvious artifact? Yes. Prevention, judgment, scope-without-title, coordination, and people development are all covered, several with new examples.

Does it distinguish team result from individual contribution? Yes, retained and made the heart of Clarify.

Does it capture judgment and prevention? Yes, retained and strengthened.

Does it preserve honest permission boundaries? Yes, kept in full and only completed where counsel confirms.

Does it distinguish claim, example, evidence, and corroboration? Yes, a new page does this and answers the "proof" overreach honestly.

Does it avoid implying better wording controls the labor market? Yes. Structural barriers are named as out of scope and the translation content is kept lean.

Does it remain useful to someone who never leaves their employer? Yes. The internal case-builder is served by capture, clarify, and the retrieval and promotion uses.

Does it remain useful to someone returning after time away? Yes, through the reconstruct route and a proposed returner example.

Does it remain useful to someone working above their title? Yes, through the new scope-without-title page and example.

Does it stop before destination-specific career decision work? Yes. The Field Kit seam and the edge-of-the-tool page hold the boundary.

Does the free Starter remain genuinely useful? Yes, unchanged, and the paid job is enlarged instead.

Does the paid product now finish a substantially larger job? Yes: a maintained, permitted, corroboration-ready record with a real reconstruction path, versus one finished accomplishment.

Could a free brag-document template substitute for the whole experience? No. No free template found combines permission, senior non-technical judgment and prevention capture, corroboration readiness, and permission-safe reconstruction after access loss.

Could generic AI create the underlying facts if the user had never recorded them? No, and the architecture is built on that asymmetry: AI polishes wording, it cannot supply judgment, decisions, and prevention that were never recorded. That is why Clarify is the center and translation is kept lean.

End of Stage 1 deliverable. Awaiting approval before Stage 2.
