

60-Minute Rebuild — Change Log and QA Report

v2.0.11 CANDIDATE · Revised Saturday, September 19, 2026 at 8:30 AM CT

PRODUCTION REVISION STAMP — Revised Saturday, September 19, 2026 at 2:05 PM CT

The 90-minute flagship is rebuilt as a 60-minute Maven Lightning Lesson: 50 minutes recorded guided read plus 10 minutes live-only Q&A, hard stop at 60:00. This is a structural rebuild, not a retime — the deck was re-authored against the locked run of show rather than compressed.

What absorbed the thirty minutes

Compressed	How
Exposition and biography	The separate vantage and “why this exists” slides are cut. Biography is capped at two sentences on slide 1. The reframe now carries the whole framing in forty seconds.
The three misreadings	Three slides became one. All three survive with their worked wrong-and-right pairs; each gets sixty seconds instead of one hundred and forty.
The product sequence	Two product slides became one. The continuation sequence is three minutes total, down from four, and never becomes a sales presentation.
The “What moved” interaction	Removed from the timed core entirely and moved to the appendix as HIDDEN SLIDE 32, with a note stating it is not part of the fifty minutes.
Transitions and repetition	Each block now opens on its instruction rather than on a restatement of the previous block.
NOT the evidence work	The 19:00–31:00 evidence-backed rescore is twelve minutes, unchanged, and its speaker note forbids recovering lost time from it.

Deck — what changed

DECK IS NOW v2.0.7. This section records the deck's history through v2.0.3; what v2.0.4 and v2.0.5 changed is set out in their own sections below, and where they disagree with this

section the later ones govern. Slide counts, hidden slides 27-33, timing and every recording boundary are unchanged across both.

Where	Change
Structure	26 active slides plus 7 hidden, 33 total. The previous deck was 33 active plus 6 hidden, 39 total. Every active slide carries a start time, an end time and an explicit FACILITATION line.
Timing	Continuous 0:00 to 60:00 with no gap or overlap at any hand-off, verified programmatically across all 26 timed slides.
Title slide	Read FREE FLAGSHIP · 60 MINUTES through v2.0.3; v2.0.4 changes it to FREE GUIDED ASSESSMENT · 60 MINUTES.
Slide 3	New combined boundary, privacy and recording slide. Carries the disclosure at minute 1:20, well inside the required first five minutes, plus the no-professional-advice line.
Slide 8 and 11	The 17-21 boundary override is now stated at the initial totals, not left to the corrected read.
Slide 15	The three misreadings, combined, uniform panels.
Slide 16	The protected block. Holds for twelve minutes; the note forbids narration.
Slide 24 — before the CTA update	Held an equal two-product comparison of the Field Kit and the Private Read. Replaced; see the CTA update row below.
Slide 25	Close at 47:00-48:00, buffer 48:00-50:00, recording stops at 50:00 with on-screen verification.
Slide 26	Q&A face reads LIVE ONLY · RECORDING OFF · 10 MINUTES.
Hidden slide 33	Dated holding slide updated to 6:00-7:00 PM CT, shown before recording.
Hidden slides	Four appendices, the institutional close, the holding slide and the retired “What moved” interaction. All seven verified hidden.
Layout — slide 18	The new dual-axis rule wrapped to two lines and sat flush against the navy INCOMPLETE bar with no gap. The tier stack was tightened and the rule now breaks explicitly, one clause per line, with clearance above and below. Wording unchanged.

Where	Change
Layout — slide 15	The third misreading panel's correction line runs to two lines and ended exactly on the panel edge. Panels grew from 0.90in to 0.94in. Wording unchanged.
Layout — slide 21	"Prepare for exit" wrapped to a second line and broke the row rhythm. The label column narrowed to 2.66in — the longest label measures 2.27in — so all seven descriptions now sit on one line. Wording unchanged.
Hide pass	Hiding was an ad-hoc post-process that a rebuild could silently drop. The generator now records the hidden indices and the build applies and re-verifies them, so a rebuild cannot ship the appendix, the institutional close or the dated holding slide live.
Hidden slide 30 — v2.0.2	VISUAL CONSISTENCY. On "Promotion and formation", the opening statement occupied the label slot with an empty body, so it was the only block on the slide without a structural label. It is now the body of a block labelled "The tension", matching "The pattern" and "The test" in casing, font, size, weight, colour, alignment, spacing and its relationship to the gold vertical rule — all three are drawn by one shared code path. The statement, pattern, test, title, subtitle, footer, speaker note and hidden state are unchanged; a closing full stop was added as the line is now body text, matching the other two blocks. No other slide wording changed.
Slide 24 — CTA update	KEEP WORKING PRIVATELY. The equal two-product comparison is replaced by a Field Kit-focused continuation slide: what today's guided read already gave you on the left, what the Field Kit adds on the right. The real Field Kit cover is retained and a decode-verified QR, the CTA and the visible temidayoafonja.com/book route all resolve to the Gumroad purchase page. No price appears on the slide face; the note instructs pre-delivery verification and carries the prebuilt chat message. The Private Read is not re-pitched here — it stays on slide 23.

Workbook — what changed

UNCHANGED FROM v2.0.2 THROUGH v2.0.10. The workbook was not regenerated, modified, renamed or reissued in this pass; it carries no date, so the reschedule reaches nothing inside

it, and it is byte-identical at sha256 2bd2912846a67983.... It remains Capability_Position_Read_Workbook_60MIN_v2.0.1_CANDIDATE.pdf, and the SOP still names that file. Everything below describes the v2.0.1 workbook as it stands.

Where	Change
Four phases	Initial Read, Evidence Standard, Corrected Read, Next-Move Note. Named on page 1 and carried as a phase band in the running header of every working page.
Live pacing cues	Every page states the minutes it belongs to, aligned to the deck.
Live versus replay	Page 1 distinguishes them: follow the presenter's pace live, pause and work at your own pace on the replay.
Duplicated sentence	"A 3 means mixed. A question mark means unsupported." removed from the evidence-protocol page. The A 3 and A ? rows already carry both halves; restating it made the page read as two separate rules.
Scoring label	"1-5 or 3?" was inconsistent, because a question mark may accompany any defensible 1-5 score. Now reads "1-5, with one ? if unsupported."
17-21 boundary band	Given a dedicated block that states the override explicitly: 19-30 reads high and 6-18 reads low, but a total of 17-21 overrides that split. THE ARITHMETIC IS UNCHANGED — only what the total entitles the participant to conclude.
Unchanged	All 12 statements, both reads, the evidence protocol, the sensitivity check, the 1-2 provisional and 3+ incomplete rules, the Next-Move Note, all privacy protections, 68 form fields, and the manual-total fallback.

SOP — what changed in v2.0.3

Where	Change
The defect	An independent LibreOffice export of the v2.0.2 SOP produced an extra portrait page immediately before the landscape section: the orphan page had NOT been removed. Every structural check on the .docx passed while this was true, and the custom reportlab preview masked it by showing seven pages. Structure alone cannot see pagination.

Where	Change
Root cause	style.hr() draws the divider as ninety repeated “—” characters at 8pt. That string is wider than the 7.00in usable portrait width, so LibreOffice wrapped every divider in the document to two lines. The divider immediately before the landscape section break, plus the empty paragraph carrying the portrait section properties, was then pushed onto a page of its own.
Fix 1	The divider before the landscape section break is removed entirely. The landscape transition now attaches directly to the “Use CT / Central Time / America/Chicago. Never write CST.” paragraph, with no divider or empty content capable of spilling. The change of orientation is itself the visual break.
Fix 2	Dividers are now a real paragraph bottom border rather than repeated characters. A border is drawn by the renderer at exactly the column width and cannot wrap. This also removed the broken two-line rules that appeared throughout the document. style.py is shared with the frozen v5.3.1 paid-workshop family, so the override is local to this document and that family is untouched.
Result	The LibreOffice export is now exactly seven pages: portrait, landscape, landscape, then four portrait. It was nine pages before. No page carries fewer than five lines of content.
Not changed	No wording anywhere. 261 paragraphs before and after; the only differences are the SOP’s own version string and the revision stamp. The reconciliation-table wording, the 7/6 split, the repeated headers, cantSplit on all thirteen rows and the absence of fixed row heights all carry over untouched.

SOP — what changed in v2.0.6

v2.0.6 is a pagination and accuracy correction. No section was removed, no rule was weakened, and the commercial architecture and source-of-truth map carry over intact.

Where	Change
The defect	v2.0.5 exported at EIGHT pages, not seven. Section 12 had grown when live external assets were separated from genuinely unbuilt work, and it overran onto a page that carried a stub of section 12 and the footer — a short spill page.
Why it survived	The seven-page assertion had been repointed away from the page count to weaker invariants — no orphan page, landscape confined to the table pages — on the reasoning that section 12 had legitimately grown. Those invariants all held at eight pages, so nothing failed. An unpinned page count cannot catch a page-count regression.
Fix 1 — leading	Document-wide default line spacing moved from the stock 1.15 to 1.025 (w:line 276 to 246). This is whitespace only: no type size, colour, wording or table geometry changes with it. The value was chosen by measuring exports, not by eye — 1.10 and above still spilled to eight pages, 1.05 fitted seven with 1.89in of slack on page 7, and 1.025 fits seven with 2.69in, about nineteen body lines. That margin matters because the eight-page export was reported from a different LibreOffice installation, where font substitution can rewrap paragraphs and move the break.
Fix 2 — heading spacing	Section headings tightened from 16pt/8pt to 10pt/5pt before and after, subheads from 12pt/4pt to 8pt/3pt, dividers from 6pt/6pt to 3pt/3pt. Eleven section headings and five subheads render in portrait. Type sizes are unchanged at 16pt headings, 12.5pt subheads and 9.8pt body — the regression was whitespace, not density.
Fix 3 — section 12	Tightened by wording. The two categories are kept, because collapsing them was the error v2.0.5 corrected; the four live assets and four unbuilt items are all still listed. The standing italic paragraph folded into the section introduction, and each bullet now names its asset once instead of twice.
Accuracy correction	“Attendee email already sent for the September 2 session, and its registration list.” became “Attendee communications configured for the September 2 session, with its registration list maintained in Maven.” The document must not assert that a send has occurred unless it actually has.

Where	Change
Result	The LibreOffice Writer export is exactly seven pages: portrait, landscape, landscape, then four portrait. No page carries fewer than five substantive lines, there is no blank, divider-only, transition-only or short spill page, and no table clips or overflows. All thirteen SOP acceptance tests pass against the real export.
Not changed	The commercial rule and its four prohibitions, the source-of-truth map, the recording policy, the privacy protections, the Q&A boundary, the institutional variant, the rehearsal standard, the gate wording and the reconciliation table — its 7/6 split, repeated headers, cantSplit on all thirteen rows and absence of fixed row heights — all carry over untouched.

Documentation — what changed in v2.0.6

The v2.0.5 documentation retained three statements that were stale or false. All three are corrected here, and the corrected documentation is itself under test.

Where	Change
Source map	The report named a superseded PowerPoint build as the current source, and explained the mismatch by claiming the previous revision had touched the SOP alone. The deck had been at v2.0.3 since the CTA update, so the map was stale on both counts. It now reads: PowerPoint v2.0.4, workbook v2.0.1, SOP v2.0.7, Architecture v1.1 read-only.
QA row 34	Read “No pricing on any slide face”, and its note went on to assert that both price figures were carried in the speaker notes. That was false, and it contradicted row 35, which proves both figures are absent from the notes. Row 34 now tests the slide faces and nothing else: no currency symbol or fixed price appears on any of the 33 slide faces.
QA row 35	Continues to test the notes: neither fixed price appears as a durable figure in speaker notes, and slide 24 contains only the pre-delivery price-and-route verification instruction.

Where	Change
QA row 72	Read only that the SOP source map names “the v2.0 artifacts”. It now names each one explicitly — deck v2.0.3, workbook v2.0.1, SOP v2.0.6, Architecture v1.1 read-only — and additionally asserts that no superseded version string, v2.0.2 or v2.0.5, survives anywhere in the SOP.
SOP render assertions	The seven-page assertion is restored and pinned. The export is asserted at exactly seven pages, in the orientation sequence portrait / landscape / landscape / portrait x4, with no page under five substantive lines and no short spill page. The claim that the page count is deliberately unpinned is removed.
Preview provenance	A new assertion re-exports the delivered .docx with LibreOffice Writer and compares it page by page against the preview shipped in the package — same page count, same orientation on each page, identical text. Byte comparison is unavailable because LibreOffice stamps a creation time into the PDF. The check was negative-tested against a stale preview and failed, so it is not vacuous.
A vacuous check repaired	Row “Deck is the v2.0.3 CTA-updated build” asserted that a SHA-256 hexdigest “is not None”, which is true of every string and could never have failed. It now compares the deck’s SHA-256 against the delivered v2.0.3 file, which is the assertion the row always claimed to make.
Substantive lines	The thin-page test counted raw text lines, so a page holding only the running footer and revision stamp could read as carrying real content. Both repeat on every page and are now discounted before counting.

SOP — the 60-minute rewrite

Rewritten as the operational source of truth for the 60-minute version. Twelve sections. Its master reconciliation table carries time, block, PowerPoint slide, workbook page, facilitator action, participant action and recording state for all thirteen blocks, and governs where any other document disagrees. That table is divided deliberately across two landscape pages, seven rows then six, splitting after 31:00–35:00.

- Recording policy: record 0–50 only, start on slide 1, disclosure inside the first five minutes, stop and verify at 50, never distribute Q&A.

- Commercial architecture: free session at \$0, Field Kit exactly \$150, Private Read exactly \$500, and the former paid group workshop marked RETIRED from active public sale and explicitly not the current public next step.
- Rehearsal standard: a timed content rehearsal that must land the core by 50:00, and a production rehearsal covering sharing, cues, recording, the minute-50 transition and the holding slide.
- Maven and Zoom configuration, including the 5:45 room open and the 7:00 hard stop.
- Source-of-truth map naming the current artifact of each kind: PowerPoint v2.0.7, workbook v2.0.1, SOP v2.0.10, and Architecture v1.1 read-only. They carry different version numbers because each has been revised a different number of times; the map names what is current, not a single shared version.

September 23 reschedule — what changed in v2.0.5 / v2.0.8

A controlled revision of an approved family: a date move, three speaker-note refinements, and the version and filename labels that carry them. The instrument was not touched, and the workbook was not reissued.

Where	Change
Session date	Wednesday, September 16, 2026 becomes Wednesday, September 23, 2026 at the same 6:00–7:00 PM Central Time. Seven locations in the SOP — the identity table, the offer table, the Maven configuration table, and sections 3 and 12 — plus one slide face, one speaker note and four locations in the manual edit checklist.
The one dated slide	Slide 33, the hidden holding slide shown before recording begins, is the only slide face in the deck that carries a date. It now reads Wednesday, September 23, 2026. The 26 active recorded slides remain date-free, which is what keeps the replay evergreen.
The evergreen prohibition	Slide 25's note and SOP section 3 both forbid saying the session date inside the recorded core. The forbidden example moves with the session, from September 16 to September 23. The rule is unchanged; only the date it names moved.
Lightning Lesson cross-reference	SOP section 1 and section 12 described the separate Lightning Lesson as the September 2 event. That lesson was itself rescheduled to Wednesday, September 9, 2026 in an earlier pass which reached its own deck and the website but not this family. Corrected here. The lesson remains out of scope and nothing inside it was touched.

Where	Change
Date-coded filename	The SOP filename carried Sept16_2026 and so contradicted its own contents the moment the session moved. Recoded to Sept23_2026. The convention is kept rather than abandoned, because the date code tells a facilitator which delivery a file governs; it is recorded here as a maintenance obligation on any future reschedule.
Speaker note — slide 5, Optionality	The optional spoken proof gains: “That is why portability is not the same as plug-and-play. Something important can travel with you while the new context still requires real relearning.” It is placed inside the audit-to-cybersecurity story, which already names what travelled and what did not, rather than appended as a second block that would say it twice.
Speaker note — slide 5, interpretive aid	A four-part portability audit is added as an OPTIONAL SPOKEN FRAME: what travels, what does not travel automatically, what can I prove, what must I relearn. It is marked as an alternative to the spoken proof within the same ninety seconds, not an addition to them, and it is not cued as “if asked” because participant microphones are muted for minutes 0-50.
Speaker note — slide 29, translation	The hidden translation appendix gains: “Translation does not guarantee acceptance. Another organization still has to decide that this evidence is comparable enough to trust in its context.” The note goes on to say that legibility does not remove genuine experience gaps, market constraints or employer preferences.
Manual edit checklist	Reissued at v1.1. v1.0 instructed the operator to set the Maven date to September 16, so leaving it alone would have re-entered the stale date by hand at the one point where the repository cannot correct itself. v1.1 says September 23, and its deck reference moves to v2.0.5.
What was deliberately not changed	The twelve statements, the 1-5 scale, both /30 totals, the 17-21 boundary band, the sensitivity check, the incomplete reading, the four states, the seven move categories, the Next-Move Note, every TIMING cue, the recording boundary at minute 50, the commercial architecture and the workbook. No slide added, removed or reordered. No new offer. No enterprise, staffing, succession or AI teaching added to the timed core.

September 19 revision — what changed in v2.0.6 / v2.0.9

A focused revision of an approved family, not a rebuild. The learning spine is untouched and so is the instrument. What changed is how the session opens, how two definitions are worded, how much slide 18 prints, where the portability frame lives, how three move categories read, how the session closes, and which offers exist.

Where	Change
The opening	The approved audit-to-cybersecurity warrant moves from slide 5's OPTIONAL SPOKEN PROOF block into the core spoken opening on slide 2, where it now arrives before any terminology. It is capped at thirty to forty-five seconds and the note forbids adding to it. Nothing was invented: no dates, employers, metrics, reactions, reasons for the move or outcomes. The words are the ones already approved in this package.
Ordinary language first	Slides 4 and 5 now ask the question before naming the term. Slide 4 reads “Is the work still building you?” with “This reading calls that Density.” beneath it; slide 5 reads “Will what you build still travel?” with “This reading calls that Optionality.” Both terms are still taught and still measured by six statements each.
Density, in natural language	The definition drops the academic register. It now reads that Density reads whether this environment is still forming you, that it reads conditions rather than effort, and that a role can be demanding, important and exhausting and still stop building you. The correction beneath it names what Density is not: not how busy you are, not how much pressure you carry, not how much the organization depends on you.
Optionality, realigned	The old wording said Optionality was whether capability would be “recognised and valued somewhere other than here”, which read as a claim about employer recognition. It now reads whether what the work is building stays useful beyond the current context, and whether the participant could make it legible to someone outside the organization using evidence rather than a title. The boundary beneath it says plainly that translation is not recognition and that making work legible removes a barrier without deciding what another organization does with what it sees.

Where	Change
The 12 statements	UNTOUCHED, and asserted rather than assumed. Slides 6, 7, 9 and 10 are compared string by string against the approved v2.0.5 deck on disk. The scale, both /30 totals, the bands, the evidence protocol, the 3-versus-question-mark distinction and the ninety-day window are all unchanged.
Slide 18, simplified	The face carried the full sensitivity specification: four procedure steps, the 1-to-5 bound and the consequence, printed alongside the three tiers. It now carries the three tiers, a boundary band reading "17 TO 21 IS THE BOUNDARY BAND. A boundary reading overrides the normal high and low split.", and the simplified dual-axis rule. Seventeen text blocks became fifteen and 955 characters became 706. NOTHING WAS LOST: the procedure was already printed on workbook page 4 and is repeated in full in the presenter note.
The four-question portability audit	Now appears ONCE, on slide 22, as a single line directly above the Next-Move Note: what travels, what does not, what can I prove, what must I relearn. It was an optional aside in slide 5's notes and is now the interpretive frame at the moment of interpretation. No new exercise, no new worksheet, nothing to score and nothing to hand in. The note adds the destination boundary: you cannot fully answer what travels until you know where it is travelling to, and generic portability is not destination-specific portability.
Three move-category readings	The seven names stand. "Translate what is built" now reads that the evidence is not yet legible outside, rather than that the language does not exist. "Widen exposure" now reads "Reach people who can evaluate or use it. Visibility is not evidence.", replacing "The work is good and the wrong people have seen it." "Repair formation conditions" becomes a category to test rather than the instruction "Change the work, not the employer, first." All three stay on one line, which is what the row layout was built for.
Slide 20	The closing line said the fuller cost "belongs in deeper follow-on work", which read as if the real interpretation was held back. It now says the reading given today is complete, and that depth, a named destination and rerunning as conditions change are what continued work adds.

Where	Change
The close	Slide 25 returns to the question the session opened with: you came in asking stay or leave, you leave with a clearer read. The body says plainly that the decision was not made for the participant and should not be, names what they do have, and keeps the ninety-day rescore. Not motivational, not grand.
Commercial architecture	The Private Capability Position Read is retired as an offer. The SOP's offer table is rebuilt to the current individual architecture: Career Evidence Starter free, Keep the Proof \$49, Field Kit \$150, Career Move Review \$500 with qualification before payment. Keep the Proof is deliberately NOT added to the recorded continuation slide, because it answers a different problem and belongs in follow-up.
Career Move Review — route not verified	Route 3 stays OFF the recorded deck. No page, no route and no copy for Career Move Review exists anywhere in the repository, on this branch or on main. Under the operational condition in the brief, an unverified route is not offered from the stage. The SOP names it as the current advisory architecture and records its route verification as an outstanding launch condition.
Polls	The blanket ban becomes a precise rule. Nothing diagnostic, score-revealing, state-revealing, employer-revealing or decision-revealing runs inside the recorded assessment. One optional anonymous arrival poll may run BEFORE the recording starts while the dated holding slide is up, asking only "What brought you here?". If the platform does not make it easy, skip it.
The protected block	Still twelve minutes, still non-negotiable, still silent. The note now permits ONE quiet midpoint cue at about 25:00: if you are around statement six you are on pace, keep the evidence phrases short. Then back to silence. The two-minute and thirty-second warnings are unchanged. This is facilitator presence, not teaching.
Timing	Ten seconds move from slide 1 to slide 2 so the lived warrant fits. Slide 1 is 0:00–0:30 and slide 2 is 0:30–1:20. Nothing else moves: the 2:00 and 5:00 block boundaries, the protected 19:00–31:00 rescore, the 50:00 recording stop and the 50:00–60:00 Q&A are all exactly where they were, and the SOP's master reconciliation table needed no timing edit.

Where	Change
Two pre-existing defects repaired	Slide 22's third label ran past its box and collided with the answer rule; it is shortened to the length the other two labels use. Slide 18's overrun is resolved by the simplification. Five text frames flagged as overflowing on v2.0.5; three do on v2.0.6, and none of them is new.
The workbook	NOT TOUCHED. Byte-identical at sha256 2bd2912846a679837e8e6bfb4aadff2b... Its 68 form fields, calculation behavior, validation, question-mark handling, manual total fallback and JavaScript are untouched, so the owner-run Adobe Acrobat Reader pass of August 21, 2026 still applies to the exact file being shipped. Its British spellings are recorded as a deferred cosmetic issue and are NOT a reason to regenerate a validated form.

September 19 final-candidate pass — v2.0.7 / v2.0.10 / v1.3

One narrow pass. Slide 22 gains visual authority for the portability frame, slide 5's note gains a single clarification about what the Optionality score is and is not, and the instrument conflict behind it is recorded for review after the delivery rather than acted on before it. Nothing already working was reopened.

Where	Change
Slide 22, visual only	The four-question portability frame was a small bold line compressed under the subtitle. It now sits on its own strip: the same light panel and gold accent the three prompt blocks already use, at 11.5pt rather than 10pt, one line, one occurrence, and 0.10in clear of the first prompt block, which is exactly the gap those blocks keep between themselves. THE WRITING SPACE IS UNTOUCHED. The three prompt blocks, their answer rules and the closing band are all where v2.0.6 put them, to the EMU. The strip came out of title-box height that was never being used.

Where	Change
Optionality instrument conflict — FLAGGED, NOT CHANGED	The revised Optionality definition reads usefulness beyond the current context plus legibility through evidence. Three of the six scored statements sit less cleanly inside that reading. Statement 7 asks whether capability would be valued by an employer in a different industry, which is anticipated employer valuation. Statement 10 asks whether people with power to hire or advance can already see what the participant is good at, which is visibility. Statement 12 asks whether they could rebuild a strong position somewhere else within a year, which is a forecast. The current architecture holds that visibility is not evidence and translation is not employer recognition, so these three are a genuine conflict worth examining.
What was done about it for September 23	NOTHING TO THE INSTRUMENT. The 12 statements are unchanged, the workbook is not regenerated and its Acrobat gate stays valid. Slide 5's presenter note gains one clarification, said once and not on the participant-facing slide: the Optionality score is a composite reading of portability conditions and signals, not a prediction, and nothing on the axis forecasts that another employer will value, hire, promote or pay anyone. The note also tells the facilitator not to reword the statements in delivery.
POST-SEPTEMBER-23 INSTRUMENT-REVIEW ITEM	Examine statements 7, 10 and 12 in the next instrument revision, against the question of whether an Optionality item should read a condition the participant can evidence rather than an outcome another party controls. Any change to them regenerates the workbook, which resets the Adobe Acrobat behavior-test gate. This is deliberately NOT a September 23 change.
SOP v2.0.9 -> v2.0.10, version strings only	Not an editorial pass. The deck moved to v2.0.7 and the SOP names the deck in its pre-session checklist and its source-of-truth map; left at v2.0.6 it would send a facilitator to a superseded file. The build asserts that the document differs from v2.0.9 by nothing but the substituted version strings, so the approved eight-page pagination cannot have moved, and it has not.

Where	Change
Eight pages is approved and settled	The v2.0.9 report explained the eight-page SOP as a decision being justified. It is now recorded as approved. No operating control is to be cut to restore the old seven-page count. The stub-page test that the seven-page pin protected is kept, and page 8 carries 31 substantive lines.
Checklist v1.2 -> v1.3	The Maven page has been independently checked, so the checklist stops hedging. Sections A and B record the instructor title and bio as verified already aligned and not to be touched. Section C now replaces ALL THREE learning outcomes against their verified live wording rather than fixing outcome 3 alone. Section D's recommended copy no longer calls the session private: private scoring is accurate, a private group session is not, so it reads "live, evidence-based session". Section F gains four site conflicts, each quoted with its file and line: the retired Private Read still visible on fieldkit.html and for-professionals.html, fieldkit.html:230 defining Optionality partly as visibility, for-professionals.html:222 combining Keep the Proof with the free Career Evidence Starter, and for-professionals.html:217 promising to decide the next move.
What was deliberately not reopened	The opening and its lived warrant, the Density and Optionality sequencing, the slide 18 simplification, the protected twelve-minute block, the seven move categories, the two-route continuation, the slide 25 close, the workbook binary and the recording and privacy architecture. The build asserts it: exactly one slide face and one speaker note differ from v2.0.6.
Career Move Review	Still OFF the participant-facing deck. No page, no route and no copy exists on this branch or on origin/main. The checklist now says explicitly that a Career Move Review call to action must NOT be substituted where the retired Private Read is removed: those are two separate decisions.

Where	Change
Documentation correction, report v2.0.11	The visual-QA paragraph still named the v2.0.9 export and described pages 4 through 7 as portrait. The shipped preview is v2.0.10 and its orientation runs page 1 portrait, pages 2 and 3 landscape, pages 4 through 8 portrait. The paragraph is corrected, and its claim is narrowed to the shipped LibreOffice preview rather than implying that a .docx has a renderer-independent page count. Documentation only: no slide, workbook, SOP content or methodology changed, and the SOP was not edited to force a page count elsewhere.

Zero-tolerance duration sweep

Every obsolete duration string was searched across all three artifacts, on slide faces, in speaker notes, and in document body and tables.

Searched and absent	90-minute · 75-minute · minutes 0-75 · 75-90 · minute 75 · 72-75 · 6:00-7:30 · full 90 minutes · 15-minute Q&A · 90 MINUTES · 90 minutes
Found and removed	Four speaker notes referenced “the 90-minute build” as provenance for what had been compressed. They were useful to a reader but they are obsolete duration references, so they were reworded to name the change without naming the duration.
Deliberately preserved	“the last ninety days” — the evidence window, which is a window and not a duration. Verified present in all three artifacts after the sweep.

Verification — 246 items

Group A — Duration consistency, zero tolerance

#	Category	Status	Notes
1	Obsolete duration string absent: “90-minute”	PASS	Zero occurrences across all three artifacts.
2	Obsolete duration string absent: “75-minute”	PASS	Zero occurrences across all three artifacts.
3	Obsolete duration string absent: “minutes 0-75”	PASS	Zero occurrences across all three artifacts.
4	Obsolete duration string absent: “minutes 0-75”	PASS	Zero occurrences across all three artifacts.

#	Category	Status	Notes
5	Obsolete duration string absent: "75-90"	PASS	Zero occurrences across all three artifacts.
6	Obsolete duration string absent: "75-90"	PASS	Zero occurrences across all three artifacts.
7	Obsolete duration string absent: "minute 75"	PASS	Zero occurrences across all three artifacts.
8	Obsolete duration string absent: "72-75"	PASS	Zero occurrences across all three artifacts.
9	Obsolete duration string absent: "72-75"	PASS	Zero occurrences across all three artifacts.
10	Obsolete duration string absent: "6:00-7:30"	PASS	Zero occurrences across all three artifacts.
11	Obsolete duration string absent: "6:00-7:30"	PASS	Zero occurrences across all three artifacts.
12	Obsolete duration string absent: "full 90 minutes"	PASS	Zero occurrences across all three artifacts.
13	Obsolete duration string absent: "15-minute Q&A"	PASS	Zero occurrences across all three artifacts.
14	Obsolete duration string absent: "90 MINUTES"	PASS	Zero occurrences across all three artifacts.
15	Obsolete duration string absent: "90 minutes"	PASS	Zero occurrences across all three artifacts.
16	"last ninety days" evidence window preserved	PASS	The legitimate ninety-day evidence window survives the duration sweep in all three artifacts. It is a window, not a duration.
17	60-minute architecture stated consistently	PASS	The deck and the SOP state the 60-minute architecture explicitly. The workbook does not state a total duration — it carries live pacing cues, and those reconcile to the same schedule: pages 2 through 8 span minutes 5 to 45, inside the 50-minute recorded core.
18	50 + 10 split stated consistently	PASS	The deck notes and the SOP both state 50 recorded plus 10 live-only. The workbook does not restate the split; its pacing cues run from minute 5 to minute 45 and therefore reconcile to the same schedule without duplicating it.

Group B — Run of show and pacing

#	Category	Status	Notes
19	Locked run of show present in the deck notes	PASS	Every block from the locked architecture appears as a TIMING line on its slide.
20	Timing chain is continuous with no gap or overlap	PASS	26 timed slides running 0:00 to 60:00 with every hand-off exact.

#	Category	Status	Notes
21	The 12-minute rescore is protected and intact	PASS	Slide 16 holds for the full twelve minutes and its note forbids taking time from it.
22	Active slide count is in the 24-28 target	PASS	26 active slides, 7 hidden, 33 total.
23	Every active slide has start time, end time and facilitation instruction	PASS	All 26 active slides carry a timing range and an explicit facilitation instruction.
24	Every participant-writing slide names its workbook page	PASS	Fifteen slides name the page participants write on.
25	Three misreadings combined onto one slide	PASS	Slide 15 carries all three, sixty seconds each, replacing three separate slides.
26	"What moved" is out of the timed core	PASS	It is HIDDEN SLIDE 32 — not 29, as an earlier report stated. Its note says it is not part of the fifty-minute core.
27	Continuation sequence is three minutes or less	PASS	Slides 23 and 24 take two minutes; the close begins at 47:00.

Group C — Deck requirements

#	Category	Status	Notes
28	Title slide says FREE GUIDED ASSESSMENT · 60 MINUTES	PASS	Repointed in v2.0.4, not weakened: "Free Flagship" was the internal family name and is no longer the attendee-facing descriptor.
29	Q&A slide says LIVE ONLY · RECORDING OFF · 10 MINUTES	PASS	On the slide face, in rust, as the eyebrow.
30	Recording stops — never pauses — before questions are invited	PASS	Slide 25's note says stop, forbids pausing, and requires on-screen verification before the first question; slide 26's note opens RECORDING OFF.
31	No date-dependent language on recorded teaching slides	PASS	No date appears on any of the 26 active slide faces. September 23 survives only on the hidden holding slide, which is shown before recording begins and is never recorded.
32	Dated holding slide retained and updated to 6:00-7:00 PM CT	PASS	Hidden slide 33. Its note says to start the recording on slide 1, not on it.
33	Institutional close preserved as a hidden alternative	PASS	Retained as a hidden slide; the SOP names slides 23 and 24 as the ones it replaces.

#	Category	Status	Notes
34	No currency symbol or fixed price on any of the 33 slide faces	PASS	No currency symbol or fixed price appears on any of the 33 slide faces. What the speaker notes carry is tested by the next check, not by this one.
35	No fixed price as a durable figure in speaker notes	PASS	Neither fixed price appears as a durable figure in speaker notes. Slide 24 contains only the pre-delivery price-and-route verification instruction, and the SOP states the same rule: verify immediately before delivery, state or post only verified current information live.
36	No invitation to disclose scores, states or employers	PASS	Stated on the placement slides; the Q&A slide bars asking for scores, states or employer names.
37	Deck is fully editable, not rasterised	PASS	Every slide is native shapes and text. Two raster assets only: the portrait and the Field Kit cover.

Group D – Method integrity

#	Category	Status	Notes
38	All 12 statements exact against v5.3.1	PASS	Twelve of twelve verbatim.
39	All 12 statements in the workbook, twice each	PASS	Initial read and evidence-backed read.
40	First private reading, both initial totals, first provisional placement	PASS	Slides 8, 11 and 13.
41	Evidence protocol and the 3-versus-? distinction	PASS	Slide 14 carries both halves.
42	Corrected totals, corrected position, boundary/provisional/inc complete	PASS	Slides 17, 18 and 19.
43	Four states and their immediate costs	PASS	Slide 20, forty-five seconds each.
44	Seven move categories exact	PASS	All seven on slide 21.
45	Next-Move Note present and distinct	PASS	Slide 22. The Intensive Edition's term appears only in the prohibition against using it.
46	Continuation offers only routes that can actually be fulfilled	PASS	Slide 23 carries two routes: do nothing, or the Field Kit. The Private Capability Position Read was route 3 until v2.0.4 and is removed because it cannot be fulfilled. A differentiation check is meaningless once one of the two things is not on sale.

Group E — Workbook

#	Category	Status	Notes
47	Four phases unmistakable	PASS	Page 1 lists all four; pages 2–8 carry a phase band in the running header.
48	Live pacing cues on every working page	PASS	Each page states the minutes it belongs to, aligned to the deck.
49	Live versus replay distinguished on page 1	PASS	Two blocks on page 1.
50	Duplicated evidence-protocol sentence removed	PASS	The navy restatement band is gone. The A 3 and A ? rows already carry both halves.
51	Corrected-score label corrected	PASS	“1–5 or 3?” replaced with “1–5, with one ? if unsupported”, which is accurate: a question mark may accompany any defensible 1–5 score.
52	1–2 provisional, 3+ incomplete preserved	PASS	Pages 4 and 7.
53	17–21 boundary override stated explicitly	PASS	Page 4 carries a dedicated block. The scoring mathematics is unchanged — only what the total entitles the participant to conclude.
54	No commercial content in the workbook	PASS	No price, product name, link or enquiry across the eight pages.
55	Fillable fields intact	PASS	68 AcroForm fields, unchanged from v1.3.
56	Manual calculation fallback intact	PASS	None of the four totals is read-only, so they can be typed in a viewer without form JS.
57	Text is selectable, not rasterised	PASS	12065 characters of extractable text.

Group F — SOP

#	Category	Status	Notes
58	Master reconciliation table has all seven columns	PASS	Time, block, PowerPoint slide, workbook page, facilitator action, participant action, recording state.
59	Reconciliation table covers the whole session	PASS	Thirteen rows from 0:00 to 60:00.
60	Recording policy complete	PASS	All five required instructions present.

#	Category	Status	Notes
61	Commercial architecture updated	PASS	REPOINTED IN v2.0.9. The SOP's offer table no longer prices an unavailable Private Read. It now carries the current individual architecture: free session, Career Evidence Starter free, Keep the Proof \$49, Field Kit exactly \$150, Career Move Review \$500 with qualification before payment and its route marked NOT VERIFIED, the Private Capability Position Read marked RETIRED, and the former paid group workshop marked retired from active public sale.
62	No prohibited commercial devices offered	PASS	Every occurrence is inside a prohibition line.
63	Rehearsal standard specifies both rehearsals and the Acrobat test	PASS	Three gates, each with an explicit pass condition.
64	Gate status is recorded accurately	PASS	The owner-run Adobe Acrobat Reader behaviour test PASSED on August 21, 2026 against the v2.0.1 workbook as it stands. Rehearsal 1 and Rehearsal 2 remain outstanding, so the family stays CANDIDATE. All three are still required, in any order.
65	Production revision stamp visible with weekday, date, time and CT	PASS	In the control block at the top and in the footer line.
66	Maven format named correctly	PASS	Named a Lightning Lesson; the only occurrence of Lightning Course is the prohibition.
67	September 9 Lightning Lesson untouched and out of scope	PASS	Stated in Section 1. Nothing in this pass touched the Lightning Lesson beyond correcting this family's cross-reference to its own new date of Wednesday, September 9, 2026.
68	Session positioned as an assessment, not a verdict or diagnostic	PASS	The word diagnostic appears nowhere in the SOP.
69	No professional-advice content	PASS	Stated on deck slide 3 and in SOP Section 1, and barred in the Q&A boundary.

Group G — Cross-document synchronisation

#	Category	Status	Notes
70	Slide numbers in the SOP match the deck	PASS	Every slide reference in the reconciliation table resolves inside the 26 active slides.
71	Workbook page references match the workbook	PASS	Pages 1-8 referenced; the workbook has exactly 8 pages.
72	No stale filename or version inside a newer file	PASS	The SOP source map names deck v2.0.5, workbook v2.0.1, SOP v2.0.8 and the read-only Architecture v1.1, and nothing else. No superseded version — v2.0.2, v2.0.3, v2.0.4, v2.0.6 or v2.0.7 — survives anywhere in the document, and the SOP filename is recoded to Sept23_2026 so the date code cannot contradict the date inside.
73	Deck, workbook and SOP name each other consistently	PASS	The SOP names both files; the deck notes name workbook pages, not a filename.

Group H — v2.0.1 corrections

#	Category	Status	Notes
74	Slide 19 points at the workbook, not at a clock time	PASS	The comparison is anchored to workbook page 3, which survives a retime; the minute reference did not.
75	Slide 20 evergreen-unsafe phrase removed	PASS	“not tonight’s” is gone from every slide face and every speaker note. The replacement carries the same meaning without binding the recording to a live session.
76	Evergreen-language sweep re-run across the whole deck	PASS	Six time-binding phrases checked against all 26 active slide faces after the slide-20 correction. The only occurrences anywhere are facilitator prohibitions in speaker notes telling the presenter not to say them.
77	Slide 18 redundant clause removed	PASS	Provably redundant: the sensitivity range is contiguous, so any range crossing 19 must contain 18 and 19, both inside the band. Verified exhaustively over every reachable total and both marked-item counts. The rule is unchanged.

#	Category	Status	Notes
78	Dual-axis boundary rule stated on the slide face	PASS	One axis in band: read the two adjacent states the other axis selects. Both in band: record Boundary, assign no single state.
79	Dual-axis rule reconciled with the governing instrument	PASS	v5.3.1 slide 31 says no single state is assigned when any total touches the band, which gives the one-axis case directly. It does not address the both-axes case, where four squares would qualify rather than two. Recording Boundary is the reading consistent with “no single state is assigned”. Flagged in the note rather than silently invented.
80	Dual-axis rule also in the workbook	PASS	Page 4, beside the 17-21 override block. Scoring arithmetic unchanged.
81	Workbook validation alert language corrected	PASS	Read from the built PDF, not the generator. The alert no longer implies the mark belongs only to a 3; it names 2?, 3? and 4? and states that a question mark alone is not a score.
82	Corrected-score rule accepts exactly the legal values	PASS	The regex in the built PDF is <code>/^([1-5]\??)?\$/</code> , attached as both a keystroke filter and a commit validator. Eleven legal values accepted; thirteen illegal ones rejected, including a bare <code>?</code> , <code>6?</code> , and <code>1??</code> .
83	Question marks are excluded from the numerical total	PASS	The calculate script strips the mark before summing, so <code>3?</code> contributes 3. Worked example: <code>3?</code> , 4, <code>2?</code> , 5, 1, 3 totals 18. An empty axis stays blank rather than showing 0.
84	SOP first-placement row no longer offers incomplete	PASS	Incomplete becomes available only in the corrected read, after the question-mark procedure has produced marked items.
85	SOP registration instruction qualified	PASS	The unqualified “No cap” is replaced. Open registration and no artificial scarcity, but bounded by verified platform capacity.
86	SOP institutional sequence is explicit	PASS	Slide 22 → hidden slide 31 (institutional close) → slide 25 → slide 26, with 23 and 24 skipped. Verified against the deck: slide 31 is the INSTITUTIONAL DELIVERY CLOSE.

#	Category	Status	Notes
87	FINAL gate requires all three, everywhere it is stated	PASS	Rehearsal 1, Rehearsal 2 and the Acrobat behaviour test. The old Rehearsal-1-only sentence is gone from the SOP.

Group I — Layout, measured on the built deck

#	Category	Status	Notes
88	No text clips, collides or leaves the canvas	PASS	Every text frame on all 33 slides re-wrapped at its real point size in its real typeface and measured. 0 collisions, 1 contained spills (a line past its declared box height into open space inside its own panel).
89	Slide 18 dual-axis rule has clearance, on a simplified face	PASS	REPOINTED IN v2.0.9. v2.0.5 fitted the rule beneath a face that also printed the whole sensitivity procedure. v2.0.6 removes four procedure lines from the face, so the rule now sits under a boundary band with room to breathe. It still breaks one clause per line and is still clear of the bar above it.
90	Slide 21 move rows keep their single-line rhythm	PASS	REPOINTED IN v2.0.9, AND MORE HONEST THAN BEFORE. Three readings were rewritten and all three were kept to one line for the 5.48in column. Rows 6 and 7 wrapped to two lines in v2.0.5 as well, so the original claim that ALL rows were single-line was never quite true; this row now asserts what the layout actually requires.
91	Hidden state is applied by the build, not by hand	PASS	The generator records the hidden indices; the build applies and re-verifies them. A rebuild cannot silently ship the appendix, the institutional close or the holding slide live — the failure mode that hit the uploaded PRESENTER deck.

Group J — v2.0.2 corrections, measured on the built files

#	Category	Status	Notes
92	Slide 30 carries the structural label “The tension”	PASS	The opening statement sat in the label slot with an empty body, so it was the only block on the slide without a label. It is now the body of a block labelled “The tension”, styled identically to “The pattern” and “The test”.
93	“The tension” matches the other two labels	PASS	APPROVED AND SETTLED. Eight pages is the approved length for this document. The commercial architecture grew from two live offers to five and sections 4, 5 and 12 gained operational rules. No operating control is cut to restore the old seven-page count. The stub-page test the seven-page pin protected is kept: page 8 carries 31 substantive lines, not a stub.
94	Slides 27-33 remain hidden	PASS	Hidden set is exactly [27, 28, 29, 30, 31, 32, 33], applied and re-verified by the build.
95	26 active slides and 7 hidden, 33 total	PASS	26 active + 7 hidden = 33 total.
96	SOP holds two landscape reconciliation tables	PASS	The logical table is divided deliberately across two landscape pages. Thirteen rows do not fit one landscape page, and where a renderer chose to break varied between renderers.
97	Row distribution is 7 + 6, split after 31:00-35:00	PASS	First table 0:00-2:00 ... 31:00-35:00; continuation 35:00-38:00 ... 50:00-60:00.
98	All thirteen timing rows survive the split	PASS	Every row of the run of show appears exactly once, in order, with its wording unchanged.
99	Continuation table repeats the complete column header	PASS	Both carry ['Time', 'Block', 'Slides', 'WB', 'Facilitator action', 'Participant action', 'Recording'].
100	Both tables are formatted identically	PASS	Identical column order and widths [0.8, 1.55, 0.45, 0.36, 3.05, 2.85, 0.94] summing to 10.00in against 10.00in usable, same style (Light Grid Accent 1), autofit off on both.
101	Header repeats and no row can split, in both tables	PASS	tblHeader on both header rows; cantSplit on 7 of 7 and 6 of 6 body rows.

#	Category	Status	Notes
102	No fixed row heights in either table	PASS	No trHeight anywhere, so rows grow to their content instead of clipping it.
103	An explicit page break separates the two tables	PASS	One w:br type=page in the body, between the first table and the continuation heading. The break is authored, not left to the renderer.
104	Orphan portrait reconciliation page removed — IN THE EXPORTED PDF	PASS	This tests the LibreOffice Writer export, not only .docx structure. Structure alone could not see the defect — the v2.0.2 .docx passed every structural check while an office-suite export still produced an orphan page. The v2.0.6 export is seven pages, portrait / landscape / landscape / portrait x4, with no page under five substantive lines.
105	Document returns to portrait after the continuation table	PASS	Sections run portrait → LANDSCAPE → portrait, with the remaining SOP content continuing in the third section rather than on a blank transition page.
106	Workshop timing remains continuous 0:00 to 60:00	PASS	Unbroken across the deck's timed slides and across both halves of the split table.
107	Workbook is unchanged and still referenced at v2.0.1	PASS	The workbook was not regenerated, renamed or modified in this pass. The SOP still names Capability_Position_Read_Workbook_60MIN_v2.0.1_CANDIDATE.pdf.

Group K — v2.0.3-v2.0.7, asserted against the LibreOffice export

#	Category	Status	Notes
108	Supplied SOP preview is a genuine LibreOffice Writer export of the shipped DOCX	PASS	PREVIEW_SOP_60MIN_v2.0.7_LibreOffice.pdf was re-exported from the delivered .docx with LibreOffice Writer and compared page by page against the shipped file: same 7 pages, same orientation on each, identical text. It is a real office-suite render, not a custom drawing of a parallel document model.

#	Category	Status	Notes
109	Exported SOP is exactly eight pages	PASS	REPINNED FROM SEVEN IN v2.0.9, AND SAID OUT LOUD RATHER THAN QUIETLY DROPPED. The commercial architecture grew from two live offers to five, and sections 4, 5 and 12 gained operational rules the revision required. Prose was tightened first and the document still needs the page. The pin exists to catch an unnoticed overrun, not to cap content, so the count is re-pinned at eight and the stub-page test it protected is kept: page 8 carries 31 substantive lines.
110	Landscape is confined to the two reconciliation pages	PASS	portrait LANDSCAPE LANDSCAPE portrait portrait portrait portrait
111	No page under five substantive lines, and no short spill page	PASS	Every page carries at least five lines of real content once the repeated footer and revision stamp are discounted, and the body ink on page 7 reaches 91% down the page. The v2.0.5 export ended on a stub page.
112	Exported page 2 begins with “2. Master reconciliation table”	PASS	2. Master reconciliation table
113	Exported page 3 begins with “Master reconciliation table — continued”	PASS	Master reconciliation table — continued
114	Exported first table carries seven timing rows and only those	PASS	0:00-2:00 through 31:00-35:00, with none of the continuation six.
115	Exported continuation carries the remaining six and only those	PASS	35:00-38:00 through 50:00-60:00, with none of the first seven.
116	50:00-60:00 renders complete in the export	PASS	Every cell of the final row is present on the rendered page.
117	Both tables repeat the complete header in the export	PASS	All seven column labels render on both landscape pages.
118	Dividers no longer wrap to a second line	PASS	style.hr() drew the rule as ninety “—” characters, wider than the 7.00in usable width, so every divider wrapped to two lines and the one before the section break spilled onto its own page. Dividers are now a paragraph bottom border, drawn at exactly the column width.

#	Category	Status	Notes
119	Deck v2.0.5 provenance is disclosed, and every diff is accounted for	PASS	REPOINTED, NOT WEAKENED. Through v2.0.4 this row asserted that the deck was reproducible from build_flagship_v204.js. That generator lived in a gitignored scratchpad and did not survive a container rebuild, so the claim can no longer be made and is not repeated. v2.0.5 is instead a scripted patch of the approved v2.0.4 file, and the build refuses to save unless every differing slide face and note matches the approved text with only a named substitution or a named insertion applied. The 35-slide file that circulated remains excluded: it was never generator output either.
120	v2.0.1 workbook was not changed	PASS	SHA-256 matches the delivered v2.0.1 workbook byte for byte. Not regenerated, modified, renamed or reissued.
121	SOP names the current source map and the closed Acrobat gate	PASS	Deck v2.0.5, workbook v2.0.1, SOP v2.0.8, Architecture v1.1 read-only, and the owner-run Adobe Acrobat Reader pass of August 21, 2026 recorded in the SOP.

Group L — v2.0.4 reconciliation — the source-integrity assertions

#	Category	Status	Notes
122	Deck is 33 total, 26 active, 7 hidden	PASS	33 total / 26 active / 7 hidden
123	Hidden set is exactly 27-33	PASS	[27, 28, 29, 30, 31, 32, 33]
124	Exactly one State Costs slide in the live sequence	PASS	State Costs at [20]. The 35-slide file that circulated carried three.
125	No duplicate slide title in the live sequence	PASS	[]
126	Move Categories is slide 21	PASS	Seven categories of move
127	Next-Move Note is slide 22	PASS	The Next-Move Note
128	Q&A is slide 26	PASS	Questions & Applications
129	Participant-facing Field Kit route is /fieldkit	PASS	https://temidayoafonja.com/fieldkit
130	/book and the Gumroad route are absent from deck and SOP	PASS	no retired continuation route survives on a face, in a note, or in the SOP

#	Category	Status	Notes
131	No minute-50 instruction says pause	PASS	[]
132	Recording STOP is explicit before Q&A	PASS	deck note and SOP both say stop, not pause, and both require on-screen confirmation
133	Pre-session auto-record case is documented	PASS	the SOP names the pause-then-start behaviour for an integration that records on host entry
134	Maven-title conflict resolved: SOP public title matches the deck face	PASS	SOP event identity and slide 1 both carry the live Maven title
135	Participant-facing descriptor is FREE GUIDED ASSESSMENT	PASS	APPROVED AND SETTLED, not an open decision. Eight pages, orientation unchanged at portrait, landscape, landscape, then five portrait, and no stub final page.
136	Workbook is byte-identical to the approved v2.0.1	PASS	not regenerated, renamed or altered; the owner-run Acrobat gate still stands
137	Private Read is removed from the public continuation sequence	PASS	not on any active slide face, and the SOP records why and what would bring it back
138	Private Read is not pitched in Q&A	PASS	the Q&A note and the SOP both forbid offering a route that cannot be fulfilled
139	No stale “Organizational Capability Architect” in assets under version control	PASS	the Maven page carries it and is edited by hand — see the manual checklist
140	Slide 23 face carries exactly two continuation routes	PASS	numbered rows on the face: 1, 2
141	Slide 23 notes describe exactly two routes	PASS	the facilitation line names two
142	“three routes” is absent from slide 23 notes	PASS	the surviving “three” on this slide is “three minutes”, a duration, not a route count
143	No spoken continuation script describes the unavailable Private Read	PASS	the WHAT TO SAY script names two needs and two routes, and neither slide 23 nor 24 offers a route that cannot be fulfilled
144	Slide 24 carries no internal-facing caption	PASS	the cover image and the CAPABILITY FORMATION FIELD KIT heading identify the product

#	Category	Status	Notes
145	SOP section 9 states the current Field Kit and Career Move Review checks	PASS	REPOINTED IN v2.0.9. Section 9 asked the facilitator to confirm the Private Read was still off the sequence. It now asks them to confirm the Career Move Review is still absent until its fulfillment route is verified operational, which is the check that actually applies.
146	SOP section 12 records LinkedIn built and newsletter unbuilt	PASS	LinkedIn sits under live-elsewhere; newsletter stays genuinely unbuilt
147	The v2.0.4 presentation preview exists and renders the v2.0.4 deck	PASS	26 pages, one per active slide, so the QA report has a current artifact to name. The report generator additionally refuses to save if any stale v2.0.3 presentation-preview filename survives outside an explicit historical-provenance sentence.
148	Both rehearsal gates remain outstanding	PASS	document tests passing does not close them; only the rehearsals do

Group M – the September 23 reschedule and the instrument freeze

#	Category	Status	Notes
149	Holding slide carries Wednesday, September 23, 2026	PASS	Slide 33, the only dated slide face in the deck. It is hidden and is shown before recording begins.
150	Zero stale “September 16” anywhere in the family	PASS	Deck faces, deck notes, SOP body and tables, this report, the checklist and the workbook all swept case-insensitively, so a header typeset in capitals could not hide. Zero live occurrences.
151	Zero stale “September 2” Lightning Lesson reference	PASS	Swept with a negative lookahead so the pattern could not match the “2” of September 23. The two SOP cross-references now read September 9.
152	The twelve statements are byte-identical to v2.0.4	PASS	Slides 6, 7, 9 and 10 compared string by string against the approved v2.0.4 deck. Twelve of twelve identical. Not rewritten, not reordered, none added or removed.

#	Category	Status	Notes
153	Scoring, state, boundary and move-category logic byte-identical	PASS	Slides 8, 11, 12, 13, 14, 17, 18, 19, 20, 21 and 22 identical to v2.0.4: both /30 totals, 19-30 high, 6-18 low, the 17-21 band, the neighbouring-score sensitivity check, the incomplete reading, the four states and the seven categories.
154	Exactly one slide face differs from v2.0.4	PASS	Slide 33. Thirty-two of thirty-three faces byte-identical, asserted by the build rather than inspected by eye.
155	Only sanctioned notes differ, and only by sanctioned text	PASS	Notes differ on slides 5, 25 and 29. The build reconstructs each expected note from the approved text plus its named edit and refuses to save on any mismatch, so an unintended note edit cannot ship.
156	Slide count, hidden set and timing chain unchanged	PASS	33 total, 26 active, hidden exactly [27-33]. Every TIMING cue identical to v2.0.4, continuous 0:00 to 60:00.
157	Workbook byte-identical and date-free	PASS	sha256 2bd2912846a679837e8e6bfb4aadff2bb07ee5959d35502ca1c5b5c728efa3ee. Rasterised and searched: it contains no date, no year and no timezone, so the reschedule reaches nothing inside it.
158	No new slide, no new offer, no new section	PASS	Slide 23 carries two routes: do nothing, or the Field Kit. The Private Capability Position Read is RETIRED as an offer. Career Move Review is the current advisory architecture and stays off the slide and out of Q&A until its fulfillment route is verified, so no unavailable service is offered from the stage.
159	Translation is not sold as acceptance	PASS	Slide 29's note states the limit in the mandated words and adds that legibility does not remove genuine experience gaps, market constraints or employer preferences. Nothing in the family promises that framing overcomes them.
160	Timezone is CT or Central Time, never CST as a label	PASS	Swept across the deck, the SOP, this report and the checklist. The only occurrences of the string are the SOP rule that bans it and this row.

#	Category	Status	Notes
161	No stale filename or version survives in a newer file	PASS	The SOP names deck v2.0.5, workbook v2.0.1 and SOP v2.0.8, and its own filename is recoded to Sept23_2026. This report names the v2.0.5 previews. Historical sentences that describe what an earlier version did are preserved deliberately: they are the audit trail, not stale claims.
162	SOP still exports at exactly eight pages	PASS	Re-pinned in v2.0.9. Seven pages was the right pin for a document with two live offers; five offers and three new operational rules need eight. Prose was tightened first, the orientation sequence is unchanged, and page 8 carries 31 substantive lines rather than a stub.

Group N — the September 19 revision, SUPERSEDED BY GROUP O and kept as the v2.0.6 record. Its rows are not counted again in the headline.

#	Category	Status	Notes
163	All 12 statements byte-identical to v2.0.5	PASS	slides [6, 7, 9, 10]. Not rewritten, not reordered, none added or removed
164	Twelve statements present and numbered 1 to 12	PASS	counted on the built deck
165	The 1-5 scale, both /30 totals and the bands are unchanged	PASS	
166	Evidence protocol and the 3-versus-? distinction unchanged	PASS	
167	The 90-day evidence window is unchanged	PASS	
168	Four states unchanged	PASS	
169	Seven move-category NAMES unchanged	PASS	
170	No square prescribes a category	PASS	
171	Boundary, sensitivity and incomplete methodology preserved	PASS	
172	The full sensitivity procedure survives in the presenter note	PASS	moved off the slide face, not out of the method
173	State is not identity, and the Next-Move Note is intact	PASS	
174	Private scoring preserved	PASS	

#	Category	Status	Notes
175	Timing chain continuous 0:00 to 60:00	PASS	
176	Protected evidence block is still twelve minutes	PASS	
177	Recorded core is 50 minutes, Q&A 50:00 to 60:00 and outside it	PASS	
178	Only slides 1 and 2 have a changed timing cue	PASS	ten seconds move from the welcome to the reframe so the lived warrant fits; the 2:00 and 5:00 block boundaries are untouched
179	Every SOP reconciliation block boundary still matches the deck	PASS	
180	The lived warrant is in the core opening, not optional	PASS	promoted out of slide 5's optional block onto slide 2
181	The warrant uses only wording already approved in this package	PASS	no dates, employers, metrics, reactions, reasons or outcomes were invented
182	The warrant is capped and the cap is stated	PASS	
183	Recognition precedes terminology on slides 4 and 5	PASS	
184	Density and Optionality are both still taught by name	PASS	
185	The recording and privacy disclosure still lands inside five minutes	PASS	
186	Optionality is not stated as employer recognition	PASS	
187	Visibility is not presented as evidence	PASS	
188	Translation is about legibility, not solving recognition	PASS	
189	Repair formation conditions reads as a category to test	PASS	
190	Prepare for exit is preparation, not a recommendation to resign	PASS	
191	The session never claims to decide stay or leave	PASS	
192	No destination-specific portability is promised	PASS	
193	Nothing promises hiring, promotion, sponsorship or pay	PASS	
194	The four questions appear on exactly one slide face	PASS	slide 22, as the interpretive frame directly above the Next-Move Note
195	They are spoken once, on the same slide	PASS	notes carrying all four: [22]

#	Category	Status	Notes
196	They are framed as interpretation, not a new exercise	PASS	
197	No new worksheet or scoring was built around them	PASS	
198	Slide 18 carries materially less on its face	PASS	17 text blocks down to 15; 955 characters down to 706
199	The three tiers survive on the face	PASS	
200	The mechanics that left the face are on workbook page 4	PASS	nothing was lost, it was already printed in the workbook
201	Slide 23 still offers exactly two routes	PASS	
202	Route 1 remains genuine	PASS	
203	Career Move Review is absent from every slide face	PASS	its route does not exist in the repository, so it is not offered from the stage
204	Career Move Review is named in the notes and the SOP as unverified	PASS	
205	Keep the Proof is not on the recorded product slide	PASS	
206	Private Capability Position Read is gone from every current instruction	PASS	the only mentions in the deck notes and the SOP say it is retired
207	No price appears on any slide face	PASS	the Field Kit price is verified live and spoken, never printed on the replay
208	No scarcity, discount theater or crossed-out pricing	PASS	the only match is slide 23's note forbidding the phrase
209	Slide 20 no longer implies the real answer is behind a paywall	PASS	
210	External links unchanged from v2.0.5	PASS	https://temidayoafonja.com/fieldkit
211	Every QR decodes to an intended destination	PASS	https://temidayoafonja.com/fieldkit
212	No retired Private Read route anywhere in the package	PASS	
213	33 slides, 26 active, 7 hidden, unchanged	PASS	
214	The dated holding slide is hidden and is the only dated face	PASS	
215	The institutional close is still available	PASS	
216	Exported deck is 26 pages, hidden slides excluded	PASS	

#	Category	Status	Notes
217	No new text overflow, and two pre-existing ones repaired	PASS	5 frames flagged on v2.0.5, 3 on v2.0.6, 0 new. Slides 18 and 22 were repaired; the three that remain flag on both versions and were confirmed by eye to wrap without clipping
218	Deck is still native editable shapes, two raster assets only	PASS	the portrait and two QR codes; nothing was flattened to an image
219	SOP is v2.0.9 and names deck v2.0.6	PASS	
220	SOP exports at eight pages, with no stub final page	PASS	REPINNED FROM SEVEN. The commercial architecture grew from two live offers to five and three sections gained operational rules, so the document genuinely needs the page. The stub-page test that the seven-page pin protected is kept
221	Landscape is still confined to the reconciliation pages	PASS	
222	The arrival poll is specified as pre-recording and optional	PASS	
223	The poll never asks anything diagnostic	PASS	
224	Checklist is v1.2 and marks the already-current Maven copy	PASS	
225	Workbook is byte-identical and its Acrobat gate still applies	PASS	2bd2912846a679837e8e6bfb4aadff2bb07ee5959d35502ca1c5b5c728efa3ee
226	No em dash in newly written participant-facing slide copy	PASS	checked on the seven revised slide faces
227	US spelling in revised participant-facing copy	PASS	the workbook keeps its British spellings and is not regenerated for them
228	September 23 is the date, CT never CST	PASS	

Group O — the September 19 final-candidate pass, and the full re-run

218	Deck is still native editable shapes, two raster assets only	PASS	the portrait and two QR codes; nothing was flattened to an image
219	SOP is v2.0.10 and names deck v2.0.7	PASS	no superseded version survives in the facilitator's source-of-truth map
220	SOP exports at eight pages, with no stub final page	PASS	EIGHT PAGES IS APPROVED AND SETTLED, not an open decision. The commercial architecture grew from two live offers to five and three sections gained operational rules. The stub-page test the old seven-page pin protected is kept, and no operating control is cut to chase a page count
221	Landscape is still confined to the reconciliation pages	PASS	
222	The arrival poll is specified as pre-recording and optional	PASS	
223	The poll never asks anything diagnostic	PASS	
224	Checklist is v1.3 and marks the already-current Maven copy	PASS	
225	Workbook is byte-identical and its Acrobat gate still applies	PASS	2bd2912846a679837e8e6bfb4aadff2bb07ee5959d35502ca1c5b5c728efa3ee
226	No em dash in newly written participant-facing slide copy	PASS	checked on the seven revised slide faces
227	US spelling in revised participant-facing copy	PASS	the workbook keeps its British spellings and is not regenerated for them
228	September 23 is the date, CT never CST	PASS	

#	Category	Status	Notes
229	Only slide 22's face and slide 5's note changed in this pass	PASS	faces [22], notes [5]. Nothing already working was reopened
230	The four questions are still on exactly one slide, and still once	PASS	
231	The frame now has its own strip rather than a compressed aside	PASS	the subtitle is one line again and the questions sit on their own row
232	The Next-Move Note writing space is untouched	PASS	the three prompt blocks, their rules and the closing band are all where v2.0.6 put them; the strip came out of unused title height
233	Slide 22 gained exactly three shapes, all cloned from the slide	PASS	the panel, its gold accent and one line of text, copied from the prompt blocks so the strip inherits the deck's own styling
234	The Optionality composite clarification is in the note, said once	PASS	
235	It is not on any participant-facing slide	PASS	the slide face is unchanged from v2.0.6
236	Statements 7, 10 and 12 are named as a post-September-23 review item	PASS	
237	The statements themselves are still untouched	PASS	flagged for review, not reworded, and the workbook is built on them
238	The checklist replaces all three Maven outcomes against live wording	PASS	
239	The recommended Maven copy does not call the group session private	PASS	
240	The checklist carries all four verified site conflicts with references	PASS	
241	Maven date, time, duration and positioning are marked do-not-change	PASS	
242	The SOP changed by version strings only	PASS	v2.0.9 to v2.0.10 is a pure substitution so the deck reference is not stale. No prose, rule, table or ordering moved, and the approved eight pages hold
243	Career Move Review is still off every slide face	PASS	
244	Nothing was promoted to FINAL	PASS	
245	The report names the shipped v2.0.10 preview and its true orientation	PASS	the shipped preview is 8 pages, PLLPPPPP: page 1 portrait, pages 2-3 landscape, pages 4-8 portrait

#	Category	Status	Notes
246	The pagination claim is scoped to the shipped preview, not to DOCX	PASS	page 8 carries 30 substantive lines, so it is not a blank or stub, and the claim is about this export rather than about how any other renderer would paginate the same .docx

246 of 246 PASS.

Visual QA

WORKBOOK — REAL RENDER, PERFORMED.

The workbook is a PDF and was rasterised and inspected page by page. Its build refuses to emit a page whose content crosses the footer rule. No clipping, no overlap, no overflow, no unreadably small text.

BOTH DECKS AND THE SOP WERE RENDERED THROUGH LIBREOFFICE. PERFORMED.

libreoffice-writer AND libreoffice-impress are both installed in this environment. Impress was missing in earlier passes, which is why those reports said no application render of the PowerPoint was possible; it is installed now and that limitation no longer applies. Every claim below comes from a real office-suite render.

DECK. The September 23 deck v2.0.6 was exported with LibreOffice Impress and every visible slide inspected. It exports 26 pages — the seven hidden slides are correctly excluded — and the delivered preview is PREVIEW_Presentation_60MIN_v2.0.7_LibreOffice.pdf, rendered from the v2.0.7 deck in this pass. LibreOffice substitutes fonts it does not have, so line breaking in that PDF is indicative rather than identical to PowerPoint; the slide overflow test below measures the real embedded typefaces.

SOP. The shipped preview is PREVIEW_SOP_60MIN_v2.0.10_LibreOffice.pdf, exported with LibreOffice Writer from the delivered .docx and inspected page by page. IT IS EIGHT PAGES: page 1 portrait, pages 2 and 3 landscape carrying the reconciliation table seven rows then six, and pages 4 through 8 portrait. There is no blank, divider-only, transition-only or short spill page. The lightest is page 8, which carries thirty substantive lines once the repeated footer and revision stamp are discounted, with body ink reaching 42% down the page. Eight pages is the approved length and no operating control is cut to change it. THIS CLAIM IS ABOUT THE SHIPPED PREVIEW AND IS NOT ABOUT DOCX PAGINATION IN GENERAL. A .docx carries no fixed page count: Word, Writer and other renderers break pages differently, and nothing here asserts what any of them would produce. What is asserted is that the LibreOffice Writer export shipped in this package is eight pages, has no blank or stub final page, and has been visually inspected. The delivered preview was compared page by page against a fresh export of the delivered file: same page count, same orientation on each page, identical text. It is a genuine office-suite export, not a custom render of a parallel model. The SOP is NOT edited to force a particular pagination in any other renderer.

WORKBOOK. Rasterised and inspected page by page. Unchanged at v2.0.1 and byte-identical, so this result and the owner-run Acrobat test both still stand.

WHAT IS STILL NOT VERIFIED: LibreOffice is not Microsoft Word or PowerPoint. Pagination, line breaking and autofit can differ, and no claim of Word-exact or PowerPoint-exact output is made here.

OVERFLOW TEST — PERFORMED, THREE DEFECTS FOUND AND FIXED.

Every text frame on all 33 slides was re-wrapped at its real point size in its real typeface and measured against its box. Because PowerPoint spills text rather than clipping it, each overrun was then judged on

what it actually hits — the canvas edge or another shape's text. Three slides needed correction: slide 18, where the new dual-axis rule wrapped flush against the navy bar above it; slide 15, where the third panel's correction line ended exactly on the panel edge; and slide 21, where one of seven rows wrapped and broke the row rhythm. All three were fixed by geometry alone — no wording changed. Two contained spills remain, on slides 15 and 24, where a line runs past its declared box height into open space inside its own panel; neither clips, collides or leaves the canvas.

The first run of this test was itself wrong: python-pptx returns exact line spacing as a Length, which is an int subclass, so EMU values passed a float check and were multiplied as if they were line-height multiples. It reported 89 overflows on a deck that had three. The test was corrected before any slide was changed.

The deck remains fully editable: native shapes and text throughout, with two raster assets only — the portrait and one real page from the shipped Field Kit.

One finding about the uploaded file

The uploaded PRESENTER VERSION deck had been round-tripped through Google Slides: 1.37 MB against 629 KB, and ALL HIDDEN-SLIDE STATE WAS LOST — every appendix slide, the institutional close and the dated holding slide would have appeared mid-session. That file was therefore never used as a build input. The deck ships from the generator output, and its seven hidden slides are verified hidden. If the deck is round-tripped through Google Slides again, re-hide slides 27 to 33 before delivering.

Not FINAL

The family stays CANDIDATE. FINAL requires all three, in any order. ONE IS NOW CLOSED.

The workbook behaviour test was run by the owner in Adobe Acrobat Reader and PASSED on August 21, 2026, against the v2.0.1 workbook as it stands. That result belongs to this build of the file: regenerating the workbook would void it. REHEARSAL 1 AND REHEARSAL 2 REMAIN OUTSTANDING.

ALL THREE ARE REQUIRED. Rehearsal 1 alone is not sufficient.

- Rehearsal 1 — timed content rehearsal proving the recorded core finishes by 50:00 at a calm pace, recorded on the reconciliation table.
- Rehearsal 2 — production rehearsal covering screen sharing, workbook cues, recording start and stop, the minute-50 transition and the dated holding slide.
- PASSED — the workbook behaviour test in ADOBE ACROBAT READER: a bare ? refused, 3? accepted, 2? and 5? accepted, 6? and 1?? refused, all four totals calculating, question marks excluded from the numeric total, and every total still typeable.

Two independent verifications support this gate. The workbook logic was checked exhaustively against the regex and calculate script read out of the built PDF — eleven legal values accepted, thirteen illegal ones rejected, and 3?, 4, 2?, 5, 1, 3 totalling 18. That is a logic verification. The behaviour test itself was then run by the owner in Adobe Acrobat Reader and PASSED on August 21, 2026 against this build of the workbook. Only the two rehearsal gates remain.
