

IS YOUR CURRENT ROLE STILL BUILDING YOUR FUTURE?

The 3P Role Read

Practice, Proof, Portability.

A role can keep you busy without building you. This read looks at your current role through three questions, one for what it is teaching you, one for what it is leaving behind, and one for what would carry if you left. **It is a read, not a verdict. A weak result is a signal to test something inside the role, not an instruction to resign.**

— READ THE ROLE

Practice

What am I becoming better able to handle? The capability this role is actively building in me right now.

☐ Strengthening ☐ Flat ☐ Eroding

The capability this role is building right now:

Proof

What evidence is this work leaving behind? The inspectable trail, not the effort I remember.

☐ Strong ☐ Thin ☐ None

The most inspectable piece of proof from the last few months:

Portability

What could another team, function, employer, or industry plausibly use? The part that is not locked to this seat.

☐ Wide ☐ Some ☐ Narrow

The piece of this work most likely to travel:

Three strengthening reads means the role is still building you. Keep it, and keep pushing on the strongest P.

A row of flat or eroding means the role is spending you faster than it is building you. That is worth acting on, but the action is a test, not an exit.

One weak P is a target, not a decision. Take it to page two.

TURN THE READ INTO A MOVE

From reading to testing

Every role is a trade. A good read is honest about both sides of it before deciding anything. Name the trade, pick the one capability worth strengthening, and set a single test you can run without leaving.

1 CURRENT TRADE

In one line: what this role gives me, and what it costs me, as it stands today.

2 WHAT I WANT TO STRENGTHEN

One capability, drawn from the weakest or most valuable P. Not a list. One.

3 ONE 30 TO 90 DAY TEST

A concrete thing to try inside this role that would show whether the capability can grow here. Name what you will do, and what result would count as the role passing the test.

The test I will run:

What result would count as the role passing:

A weak read is information, not a resignation letter. Run the test first. If the role cannot move the P you need even when you push on it directly, that is a different decision, and a much clearer one.
